

## **Certificate of Analysis for NR-14749**

## Mycobacterium tuberculosis, Strain CDC1551, Transposon Mutant 1114 (MT1162, Rv1130)

## Catalog No. NR-14749

**Product Description:** *Mycobacterium tuberculosis* (*M. tuberculosis*), transposon mutant 1114 was created by disruption of a conserved hypothetical protein (MT1162, Rv1130), of the wild-type strain CDC1551. *M. tuberculosis*, strain CDC1551 is a clinical isolate that exhibited high levels of infectivity and virulence during a tuberculosis outbreak that occurred in rural Kentucky and Tennessee from 1994 to 1996.

Lot<sup>1</sup>: 59283534 Manufacturing Date: 01JUN2010

| TEST  | SPECIFICATIONS | RESULTS                            |
|---|----------------|------------------------------------|
| Phenotypic Analysis   |                |                                    |
| Colony morphology <sup>2</sup>                              |                |                                    |
| Middlebrook 7H10 Agar with OADC enrichment                  | Report results | Irregular, peaked, white and rough |
| Lowenstein-Jensen (LJ) Agar                                 | Report results | Growth                             |
| Tryptic Soy Agar  | Report results | No growth                          |
| Antibiotic Susceptibility <sup>3</sup>                      |                |                                    |
| Kanamycin (20 μg/mL)  | Resistant      | Resistant                          |
| Hygromycin (50 μg/mL)                                       | Susceptible    | Susceptible                        |
| Point of Insertion <sup>3,4</sup>                           |                |                                    |
| Base number (TA site) relative to the start position of ORF | Report results | 440                                |

<sup>&</sup>lt;sup>1</sup>M. tuberculosis, transposon mutant 1114 was prepared by inoculation of a LJ agar slant (VWR Catalog No. 29447-808) with 0.1 mL of the deposited material and incubated 30 days at 37°C.
