

Certificate of Analysis for HM-622

Klebsiella oxytoca, Strain MIT 09-7231

Catalog No. HM-622

Product Description: Klebsiella oxytoca (K. oxytoca), strain MIT 09-7231 was isolated from

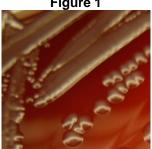

mouse feces.

Lot^{1,2}: 59920844 Manufacturing Date: 08APR2011

TEST	SPECIFICATIONS	RESULTS
Phenotypic Analysis Cellular morphology Colony morphology ³	Gram-negative rod Report results	Gram-negative rod Circular, convex, entire, smooth and cream (Figure 1)
Genotypic Analysis Sequencing of 16S ribosomal RNA gene (~ 1380 base pairs)	≥ 99% identical to depositor's sequence Consistent with <i>K. oxytoca</i>	≥ 99% identical to depositor's sequence Consistent with <i>K. oxytoca</i>
Viability (post-freeze) ³	Growth	Growth

Quality control of HMP material is only performed to demonstrate that the material distributed by BEI Resources is identical to the deposited material. It should not be considered a complete characterization of the deposited organism.

²K. oxytoca, strain MIT 09-7231 was deposited by Professor James G. Fox, DVM, DACLAM, Division of Comparative Medicine, Massachusetts Institute of Technology, Cambridge, Massachusetts. HM-622 was produced by inoculation of the deposited material into Tryptic Soy Broth and incubated for 24 hours at 37°C in an aerobic atmosphere. Broth inoculum was added to Kolles which were grown 24 hours at 37°C to produce

³²⁴ hours at 37°C in an aerobic atmosphere on Tryptic Soy Agar with 5% defibrinated sheep blood
