

Mycobacterium tuberculosis*, Strain H37Rv, Total Lipids (normoxic culture)*Catalog No. NR-36509**

This reagent is the tangible property of the U.S. Government.

Product Description: NR-36509 is a preparation of the total cellular lipids of *Mycobacterium tuberculosis*, strain H37Rv, including those with known biological activities, such as trehalose dimycolate (TDM) and sulpholipids. The culture was grown to late-log phase under normoxic conditions in glycerol-alanine-salts medium, washed with PBS, inactivated by gamma irradiation and dried. The cellular lipids were extracted with 30 mL of chloroform/methanol (2:1) per gram of cells at 55°C for 18 hours. Cells were removed by filtration and contaminating hydrophilic molecules were removed by biphasic partitioning with water (Folch Wash). The organic phase of the Folch wash was collected and dried.
