

## **Certificate of Analysis for HM-1106**

## Gardnerella vaginalis, Strain JCP7276

## Catalog No. HM-1106

**Product Description:** Gardnerella vaginalis (G. vaginalis), strain JCP7276 was isolated on December 2, 2010, from a clinical vaginal swab collected from a woman that tested intermediate for bacterial vaginosis (Nugent score = 5) at the Washington University School of Medicine in St. Louis, Missouri, USA.

Lot<sup>1,2</sup>: 62082915 Manufacturing Date: 18OCT2013

TEST	SPECIFICATIONS	RESULTS
Phenotypic Analysis Cellular morphology Colony morphology Motility (wet mount)	Report results <sup>3</sup> Report results Report results	Gram-negative pleomorphic rods Punctiform, smooth and gray (Figure 1) Non-motile
Genotypic Analysis Sequencing of 16S ribosomal RNA gene (~ 850 base pairs)	≥ 99% identical to depositor's sequence	≥ 99% identical to depositor's sequence (GenBank: JX860309)
Viability (post-freeze) <sup>4</sup>	Growth	Growth

<sup>&</sup>lt;sup>1</sup>Quality control of HMP material is only performed to demonstrate that the material distributed by BEI Resources is identical to the deposited material. It should not be considered a complete characterization of the deposited organism.

<sup>4</sup>48 hours at 37°C in an anaerobic atmosphere (80% N<sub>2</sub>:20% CO<sub>2</sub>) on Chocolate agar

Fiaure 1

<sup>&</sup>lt;sup>2</sup>G. vaginalis, strain JCP7276 was deposited by Amanda Lewis, PhD, Assistant Professor of Molecular Microbiology, Department of Molecular Microbiology, Washington University School of Medicine, St. Louis, Missouri. HM-1106 was produced by inoculation of the deposited material into NYC III broth and incubated for 46 hours at 37°C in an anaerobic atmosphere (80% N<sub>2</sub>:20% CO<sub>2</sub>). The material from the initial growth was passaged once in NYC III broth for 46 hours at 37°C in an anaerobic atmosphere to produce this lot. Purity of this lot was assessed for 7 days under propagation conditions.

<sup>&</sup>lt;sup>3</sup>G. vaginalis is often described as a Gram-variable organism but has a thin, Gram-positive cell wall [see Harper, J. J. and G. H. G. Davis. "Cell Wall Analysis of Gardnerella vaginalis (Haemophilus vaginalis)." Int. J. Syst. Bacteriol. 32 (1982): 48-50].
