

Certificate of Analysis for HM-617

Bacteriophage DO4, Infectious for Pseudomonas aeruginosa

Catalog No. HM-617

Product Description: Bacteriophage DO4 (HMP ID 9933) is a reference genome for The Human Microbiome Project (HMP).

Lot^{1,2}: 59849554 Manufacturing Date: 04MAY2011

TEST	SPECIFICATIONS	RESULTS
Plaque Morphology	Report results	Pinpoint
Titer ³ Plaque-forming units (pfu) with Pseudomonas aeruginosa	>10 ⁶ pfu per mL	4 x 10 ¹⁰ pfu per mL

¹Quality control of HMP material is only performed to demonstrate that the product distributed by BEI Resources is identical to the deposited material. It should not be considered a complete characterization of the deposited material.

²The deposited material was added to a Luria-Burtani (LB) soft agar overlay (0.5%) supplemented with 10 mM MgSO₄ containing the phage host, Pseudomonas aeruginosa, strain PA14. The soft agar overlay was added to an LB agar Kolle supplemented with 10 mM MgSO₄ and incubated 24 hours at 30°C in an aerobic atmosphere. After two additional passages under the above conditions, the bacteriophage was harvested to produce this lot.

³Lysis was observed on the soft agar overlay after 24 hours at 37°C in an aerobic atmosphere.
