

***Mycobacterium tuberculosis*, Strain CDC1551, Transposon Mutant 157 (MT2357, Rv2300c)**

Catalog No. NR-14781

Product Description: *Mycobacterium tuberculosis* (*M. tuberculosis*), transposon mutant 157 was created by disruption of a conserved hypothetical protein (MT2357, Rv2300c) of the wild-type strain CDC1551. *M. tuberculosis*, strain CDC1551 is a clinical isolate that exhibited high levels of infectivity and virulence during a tuberculosis outbreak that occurred in rural Kentucky and Tennessee from 1994 to 1996.

Lot¹: 62676028

Manufacturing Date: 08JUL2014

TEST	SPECIFICATIONS	RESULTS
Phenotypic Analysis Lowenstein-Jensen (LJ) agar ² Tryptic Soy agar ² Acid-fast stain Antibiotic Susceptibility ⁴ Kanamycin (20 µg/mL) Hygromycin (50 µg/mL)	Report results Report results Positive (red colonies) Resistant Susceptible	Growth Growth ³ Positive (red colonies) Resistant Susceptible
Point of Insertion^{4,5} Base number (TA site) relative to the start position of ORF	Report results	118

¹*M. tuberculosis*, transposon mutant 157 was prepared by inoculation of a LJ agar slant (VWR Catalog No. 29447-808) with 0.1 mL of the deposited material and incubated 23 days at 37°C in an aerobic atmosphere with 5% CO₂.

²23 days at 37°C in an aerobic atmosphere with 5% CO₂

³A small number of tiny colonies were observed on the primary inoculation zone as a result of residual growth medium present in the inoculate. An acid-fast stain was performed to confirm that the colonies were *M. tuberculosis*.

⁴Performed on the seed material by Colorado State University under the TB Vaccine Testing and Research Materials Contract (NIH)

⁵The POI deviates by less than 10 base pairs from the POI reported by Johns Hopkins University.

Date: 22 OCT 2014
