

Macrophage Cell Line Derived from TLR2 Knockout Mice

Catalog No. NR-9457

This reagent is the property of the U.S. Government.

Product Description: The murine macrophage cell line, NR-9457, was derived using primary bone marrow cells from TLR2 (toll-like receptor 2) knockout mice. The primary bone marrow cells were immortalized by infection with the ecotropic transforming replication-deficient retrovirus J2 using techniques described in the literature. Characterization based on immunofluorescence, stimulation assays and flow cytometry demonstrated that the immortalized cell line retains its macrophage-specific morphological, functional and surface expression properties.
