

***Mycobacterium tuberculosis*, Strain CDC1551, Transposon Mutant 1257 (MT2088, Rv2029c)**

Catalog No. NR-18046

This reagent is the tangible property of the U.S. Government.

Product Description: *Mycobacterium tuberculosis* (*M. tuberculosis*), transposon mutant 1257 was created by disruption of a probable phosphofructokinase (MT2088, Rv2029c) of the wild-type strain CDC1551. *M. tuberculosis*, strain CDC1551 is a clinical isolate that exhibited high levels of infectivity and virulence during a tuberculosis outbreak that occurred in rural Kentucky and Tennessee from 1994 to 1996.

Manufacturing Date: 03MAY2016

| TEST | SPECIFICATIONS | RESULTS |
|--|--|--|
| Phenotypic Analysis Colony morphology ² Middlebrook 7H10 agar with OADC enrichment Lowenstein-Jensen (LJ) agar Tryptic Soy agar (TSA) Antibiotic Susceptibility ³ Kanamycin (20 µg/mL) Hygromycin (50 µg/mL) | Report results Report results Report results Resistant Susceptible | Circular, raised, undulate, rough and cream Growth No growth Resistant Susceptible |
| Point of Insertion^{3,4} Base number (TA site) relative to the start position of ORF | Report results | 986 |

¹*M. tuberculosis*, transposon mutant 1257 was prepared by inoculation of a LJ agar slant (VWR Catalog No. 29447-808) with 0.1 mL of the deposited material and incubated for 36 days at 37°C in an aerobic atmosphere with 5% CO₂.

²36 days at 37°C in an aerobic atmosphere with 5% CO₂

³Performed on the seed material by Colorado State University under the TB Vaccine Testing and Research Materials Contract (NIH)

⁴The POI deviates by less than 10 base pairs from the POI reported by Johns Hopkins University.
