

Marburg Marburgvirus, Musoke, Gamma-Irradiated

Catalog No. NR-48951

This reagent is the tangible property of the U.S. Government.

Source of Irradiated Antigen: NR-48949, Lot No. 62989171

Irradiation Protocol: Infected cell pellets were resuspended in 50 mM sodium borate and 120 mM sodium chloride (pH 9) containing 1% Triton X-100, gamma-irradiated (5×10^6 RADs) on dry ice and sonicated. Cell debris was removed by centrifugation and the supernatant containing the irradiated antigen was aliquoted and vialled.

Lot¹: 62995087

Manufacturing Date: 01AUG2014

| TEST | SPECIFICATIONS | RESULTS |
|---|--------------------|--------------------|
| Enzyme Immunosorbent Assay (EIA) Using NR-48951 and Rabbit Polyclonal Antibody to Marburg Marburgvirus¹ | Reactive | Reactive |
| Cell Culture Safety Test for Residual Virus² | No recovered virus | No recovered virus |

¹The contributor recommends using a 1:2000 dilution of NR-48951 in 0.01 M PBS, pH 7.2 to coat the plates.

²Following the procedure described in Towner, J. S., et al. "High-Throughput Molecular Detection of Hemorrhagic Fever Virus Threats with Applications for Outbreak Settings." *J. Infect. Dis.* 196 Suppl. 2 (2007) S205-S212. PubMed: 17940951.

Date: 23 JAN 2017
