DATA SHEET

Reagent: Feline IgA Monoclonal (IgA9-6A)

Catalog Number: 4403

Lot Number: 1

Release Category: A

Provided: 0.5 mg, purified from tissue culture supernatant.

Host Site: Balb/c x NS-1.

Special Characteristics: This IgG₁ λ antibody was raised against feline IgA alpha chain. Some cross-reactivity with dog, rhesus, and marmoset IgA. Recognizes a 55 kDa IgA major band in WB using purified cat IgA, but does not react with pure IgM, IgG, or light chain. Binds specifically immune IgA in WB when acting as an IgA probe. Excellent capture reagent or probe in ELISA. Detects IgA secreted in cat saliva when used in a sandwich ELISA with IgA5-3B-biotin. Can be cross-linked to Sepharose-4B for affinity column isolation of IgA. Reactivity in IFA, FACS and immunohistochemistry is unknown.

Contributor: DAIDS, NIAID. Produced by Custom Monoclonals International.
