DATA SHEET

Reagent:	Anti-HIV-1 RT
Catalog Number:	6195
Lot Number:	140226
Provided:	200 µL of whole antiserum in 0.09% Sodium Azide
Host:	Rabbit.
Titer:	Working dilution, 1:2000.
Description:	Routinely used for detection of proteins in bacterial extracts following induction of protein synthesis. The titer refers to what would be necessary to see p66 and p51 in a Western analysis with conventional colorimetric detection methods.
Special Characteristics:	Antigen is recombinant HIV-1 RT. The antibody is not directed against a specific epitope. No cross reactivity known.
Recommended Storage:	Keep at 4°C for short term storage and -80°C for long term storage. Avoid freeze-thaw cycles as reagent degradation may result.
Contributor:	DAIDS, NIAID (produced by abcam).
NOTE:	Acknowledgment for publications should read "The following reagent was obtained through the NIH AIDS Reagent Program, Division of AIDS, NIAID, NIH."

ALL RECIPIENTS OF THIS MATERIAL MUST COMPLY WITH ALL APPLICABLE BIOLOGICAL, CHEMICAL, AND/OR RADIOCHEMICAL SAFETY STANDARDS INCLUDING SPECIAL PRACTICES, EQUIPMENT, FACILITIES, AND REGULATIONS. NOT FOR USE IN HUMANS.
