DATA SHEET

Reagent:	☒ HIV-1 NL4-3 gp41 D36G Virus
Catalog Number:	9489
Lot Number:	032560
Release Category:	E
Provided:	1 ml cell-free virus p24 = 82 ng/mL
Original Source:	The noted mutation was introduced into pNL4-3 (cat# 144) and the DNA was transfected into 174xCEM cells (cat# 272). Virus was collected after maximum cytopathic effects were noted.
Propagation:	Virus stocks are typically grown in CEM CD4+ cells (cat# 117) or MT-4 cells (cat# 120). Otherwise, the virus should be able to be produced in any other receptive target cell. Virus is cytopathic and will produce large syncytia.
Sterility:	Negative for mycoplasma, bacteria and fungi.
Description:	This virus is part of a panel of NL4-3-based viruses that were constructed to study resistance to the fusion inhibitor Enfuvirtide (T-20).
Special Characteristics:	This virus is based on cat# 9489 (HIV-1 NL4-3 gp41 D36G Virus). It contains substitutions relative to the subtype B consensus sequence in gp41 amino acids 36-45 which confer decreased susceptibility to Enfuvirtide (T-20, cat# 9845). This isolate utilizes the CXCR4 coreceptor. Table of Panel
Recommended Storage:	Liquid nitrogen.
Contributor:	Trimeris, Inc.
