

Lactobacillus iners, Strain UPII 143-D

Catalog No. HM-126

Product Description:

Lactobacillus iners (*L. iners*), strain UPII 143-D was isolated from a human vagina. HM-126 lot 70046941 was produced by the inoculation of BEI Resources seed lot 59588458 into Lactobacilli MRS broth and incubated for 2 days at 37°C in an aerobic atmosphere with 5% CO₂. The material from the initial growth was passaged once in Tryptic Soy agar with 5% defibrinated sheep blood kolles for 1 day at 37°C in an aerobic atmosphere with 5% CO₂ to produce this lot. Quality control testing was completed under propagation conditions unless otherwise noted.

Note: Quality control of HMP material is only performed to demonstrate that the material distributed by BEI Resources is identical to the deposited material. It should not be considered a complete characterization of the deposited organism.
