

Product Information Sheet for HM-1056

***Ruminococcus gnavus*, Strain CC55_001C**

Catalog No. HM-1056

For research use only. Not for use in humans.

Contributor:

Emma Allen-Vercoe, Assistant Professor, Department of Molecular and Cellular Biology, University of Guelph, Guelph, Ontario, Canada

Manufacturer:

BEI Resources

Product Description:

Bacteria Classification: *Lachnospiraceae*, *Blautia* (Previously classified as *Ruminococcaceae*, *Ruminococcus*)¹

Species: *Ruminococcus gnavus*

Strain: CC55_001C

Original Source: *Ruminococcus gnavus* (*R. gnavus*), strain CC55_001C was isolated in October 2010 from colonic biopsy tissue of a human subject in Victoria, British Columbia, Canada.²

Comments: *R. gnavus*, strain CC55_001C ([HMP ID 1201](#)) is a reference genome for [The Human Microbiome Project](#) (HMP). HMP is an initiative to identify and characterize human microbial flora. The complete genome of *R. gnavus*, strain CC55_001C was sequenced at the [Broad Institute](#) (GenBank: [AZJF00000000](#)).

Note: HMP material is taxonomically classified by the depositor. Quality control of these materials is only performed to demonstrate that the material distributed by BEI Resources is identical to the deposited material.

R. gnavus is an obligately anaerobic, non-sporulating, Gram-positive coccus to coccobacillus recognized for its highly fermentative nature.³ *R. gnavus* is commonly found in the digestive tract of humans and animals. In general, *R. gnavus* is viewed as a beneficial gut bacterium, with only a few cases of human infection ever reported.^{4,5}

Material Provided:

Each vial contains approximately 0.5 mL of bacterial culture in Rumen Fluid-Glucose-Cellobiose broth supplemented with 10% glycerol.

Note: If homogeneity is required for your intended use, please purify prior to initiating work.

Packaging/Storage:

HM-1056 was packaged aseptically in cryovials. The product is provided frozen and should be stored at -60°C or colder immediately upon arrival. For long-term storage, the vapor phase of a liquid nitrogen freezer is recommended. Freeze-thaw cycles should be avoided.

Growth Conditions:

Media:

Rumen Fluid-Glucose-Cellobiose broth

Rumen Fluid-Glucose-Cellobiose agar³ or Fastidious Anaerobe agar with 5% sheep blood² or Tryptic Soy agar with 5% sheep blood³ or equivalent

Note: HM-1056 grows best on Tryptic Soy agar with 5% defibrinated sheep blood. Increased incubation time may be required for Rumen Fluid-Glucose-Cellobiose agar.

Incubation:

Temperature: 37°C

Atmosphere: Anaerobic

Propagation:

1. Keep vial frozen until ready for use, then thaw.
2. Transfer the entire thawed aliquot into a single tube of broth.
3. Use several drops of the suspension to inoculate an agar slant and/or plate.
4. Incubate the tube, slant and/or plate at 37°C for 1 to 2 days.

Citation:

Acknowledgment for publications should read "The following reagent was obtained through BEI Resources, NIAID, NIH as part of the Human Microbiome Project: *Ruminococcus gnavus*, Strain CC55_001C, HM-1056."

Biosafety Level: 1

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the following publication: U.S. Department of Health and Human Services, Public Health Service, Centers for Disease Control and Prevention, and National Institutes of Health. [Biosafety in Microbiological and Biomedical Laboratories \(BMBL\)](#). 6th ed. Washington, DC: U.S. Government Printing Office, 2020.

Disclaimers:

You are authorized to use this product for research use only. It is not intended for human use.

Use of this product is subject to the terms and conditions of the BEI Resources Material Transfer Agreement (MTA). The MTA is available on our Web site at www.beiresources.org.

While BEI Resources uses reasonable efforts to include accurate and up-to-date information on this product sheet, neither ATCC® nor the U.S. Government makes any warranties or representations as to its accuracy.
