## Influenza A Virus, A/common goldeneye/lowa/3192/2009 (H11N9)

## Catalog No. NR-31134

Product Description: Pooled allantoic fluid from specific pathogen free (SPF) embryonated chicken eggs ${ }^{1}$ infected with influenza A virus, A/common goldeneye/lowa/3192/2009 (H11N9)

Lot ${ }^{2}$ : 61788267
Manufacturing Date: 31MAY2013

${ }^{1} 9$ - to 10-day-old SPF Embryonated Chicken Eggs acquired from B\&E Eggs, York Springs, Pennsylvania
${ }^{2}$ Grown in the allantoic cavity of embryonated chicken eggs ${ }^{1}$ for 2 days at $35^{\circ} \mathrm{C}$ in a humidified chamber
${ }^{3}$ The Chicken Embryo Infectious Dose $50 \%\left(\right.$ CEID $\left._{50}\right)$ is the dilution of virus that under the conditions of the assay can be expected to infect $50 \%$ of the inoculated embryonated chicken eggs, just as a Lethal Dose $50 \%\left(L D_{50}\right)$ is expected to kill half of the animals exposed. A reciprocal of the dilution required to yield the $\mathrm{CEID}_{50}$ provides a measure of the infectious titer (or infectivity) of a virus preparation.
