## Certificate of Analysis for NR-53907

## Adenovirus 10, JJ

## Catalog No. NR-53907

## Product Description:

Adenovirus (ADV), 10 was isolated prior to 1963 from an eye swab from a patient with conjunctivitis in Washington, D.C., USA. NR-53907 lot 70040924 was produced by infecting Homo sapiens lung carcinoma cells (A549; ATCC ${ }^{\circledR}$ CCL$185^{\text {TM }}$ ) with mycoplasma-cured reconstituted lyophilized material (BEI Resources lot V-210-003-514) and incubating in Eagle's Minimum Essential Medium (ATCC ${ }^{\circledR} 30-2003^{\text {TM }}$ ) supplemented with $2 \%$ fetal bovine serum (ATCC ${ }^{\circledR} 30-2020^{\text {TM }}$ ) for 5 days at $37^{\circ} \mathrm{C}$ with $5 \% \mathrm{CO}_{2}$.

${ }^{1}$ The Tissue Culture Infectious Dose $50 \%\left(\mathrm{TCID}_{50}\right)$ endpoint is the $50 \%$ infectious endpoint in cell culture. The TCID ${ }_{50}$ is the dilution of virus that under the conditions of the assay can be expected to infect $50 \%$ of the culture vessels inoculated, just as a Lethal Dose $50 \%\left(\mathrm{LD}_{50}\right)$ is expected to kill half of the animals exposed. A reciprocal of the dilution required to yield the TCID $_{50}$ provides a measure of the titer (or infectivity) of a virus preparation.
