This reagent is the tangible property of the U.S. Government.

**Product Description:** NR-14866 is a preparation of genomic DNA extracted from a culture of *Mycobacterium tuberculosis*, strain CDC1551. The culture was grown to late-log phase in glycerol-alanine-salts medium, and harvested by centrifugation. Cell lipids were removed and the delipidated cells were treated with lysozyme and RNase overnight followed by sodium dodecyl sulphate and Proteinase K. DNA was precipitated with isopropanol.
