

Influenza A Virus, A/New York/18/2009 (H1N1), Egg Isolate (Produced in Eggs)

Catalog No. NR-14694

For research use only. Not for human use.

Contributor:

Alexander Klimov, Ph.D., Chief, Viral Surveillance and Diagnostic Branch, Influenza Division, National Center for Immunization and Respiratory Diseases, Coordinating Center for Infectious Diseases, Centers for Disease Control and Prevention, Atlanta, Georgia

Manufacturer:

BEI Resources

Product Description:

Virus Classification: *Orthomyxoviridae, Influenzavirus A*

Species: Influenza A virus

Strain: A/New York/18/2009 (H1N1)

Original Source: Influenza A virus, A/New York/18/2009 (H1N1)¹ was isolated from a 15-year-old male in New York on April 25, 2009.

Comments: Sequence information is available for influenza A virus, A/New York/18/2009 (H1N1) at the [Influenza Research Database](http://www.beiresources.org/influenza-research-database).

Material Provided:

Each vial contains approximately 1 mL of pooled allantoic fluid from specific-pathogen free (SPF) embryonated chicken eggs infected with influenza A virus, A/New York/18/2009 (H1N1).

Note: If homogeneity is required for your intended use, please purify prior to initiating work.

Packaging/Storage:

NR-14694 was packaged aseptically in screw-capped plastic cryovials. The product is provided frozen on dry ice and should be stored at -70°C or colder immediately upon arrival. For long-term storage, the vapor phase of a liquid nitrogen freezer is recommended. Freeze-thaw cycles should be avoided.

Growth Conditions:

Host: 9 to 11-day-old SPF embryonated chicken eggs

Infection: Embryonated chicken eggs must be candled for viability prior to inoculation

Incubation: 2 to 3 days at 33-35°C in a humidified chamber

Effect: Hemagglutination activity using turkey red blood cells and allantoic fluid from infected embryonated chicken eggs

Citation:

Acknowledgment for publications should read "The following reagent was obtained through the NIH Biodefense and

Emerging Infections Research Resources Repository, NIAID, NIH: Influenza A Virus, A/New York/18/2009 (H1N1), Egg Isolate (Produced in Eggs), NR-14694."

Biosafety Level: 2

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the following publication: U.S. Department of Health and Human Services, Public Health Service, Centers for Disease Control and Prevention, and National Institutes of Health. Biosafety in Microbiological and Biomedical Laboratories. 5th ed. Washington, DC: U.S. Government Printing Office, 2007; see www.cdc.gov/od/ohs/biosfty/bmbl5/bmbl5toc.htm.

General laboratory work, including growth of virus in cell culture or embryonated eggs, should be performed in a Class II biosafety cabinet in a biosafety level-2 (BSL-2) laboratory. Current CDC recommendations for the handling of novel swine-origin H1N1 influenza viruses can be found at http://www.cdc.gov/h1n1flu/guidelines_labworkers.htm.

Disclaimers:

You are authorized to use this product for research use only. It is not intended for human use.

Use of this product is subject to the terms and conditions of the BEI Resources Material Transfer Agreement (MTA). The MTA is available on our Web site at www.beiresources.org.

While BEI Resources uses reasonable efforts to include accurate and up-to-date information on this product sheet, neither ATCC® nor the U.S. Government make any warranties or representations as to its accuracy.
