¹Quality control of HMP material is only performed to demonstrate that the material distributed by BEI Resources is identical to the deposited material. It should not be considered a complete characterization of the deposited organism.

²HM-107 was produced by inoculation of the deposited material into Tryptic Soy Broth and incubated for 24 hours at 30°C in an aerobic atmosphere. Broth inoculum was added to Kolles which were grown 24 hours at 30°C to produce this lot.
