

Certificate of Analysis for HM-150

Lachnospiraceae, Strain 6_1_63FAA

Catalog No. HM-150

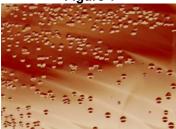

Product Description: Lachnospiraceae, strain 6_1_63FAA was obtained from a healthy biopsy sample taken from the ascending colon of a 51-year-old female patient with remittent Crohn's disease.

Lot^{1,2}: 60836072 Manufacturing Date: 29MAR2012

TEST	SPECIFICATIONS	RESULTS
Phenotypic Analysis Cellular morphology ³ Colony morphology ⁴	Report results Report results	Gram-variable rods Circular, entire, convex and light gray (Figure 1)
Genotypic Analysis Sequencing of 16S ribosomal RNA gene (1440 base pairs)	≥ 99% identical to GenBank: ACTV01000014 (<i>Lachnospiraceae</i> , strain 6_1_63FAA)	≥ 99% identical to GenBank: ACTV01000014 (<i>Lachnospiraceae</i> , strain 6_1_63FAA)
Viability (post-freeze) ⁴	Growth	Growth

¹Quality control of HMP material is only performed to demonstrate that the material distributed by BEI Resources is identical to the deposited material. It should not be considered a complete characterization of the deposited organism.

⁴48 hours at 37°C and anaerobic atmosphere on Tryptic Soy Agar with 5% defibrinated sheep blood

Date: 09 JUL 2012 Signature:

²L. bacterium, strain 6_1_63FAA was deposited by Professor Emma Allen-Vercoe, Department of Molecular and Cellular Biology, University of Guelph, Guelph, Ontario, Canada. The deposited material was inoculated into Trypticase-Yeast Extract (TY) broth and incubated for 72 hours at 37°C and anaerobic atmosphere (80% N₂:10% CO₂:10% H₂). The material from the initial growth was passaged once in TY broth for 72 hours at 37°C and anaerobic atmosphere to produce this lot.

³Lachnospiraceae species have a Gram-positive cell wall but several stain Gram-variable; see Rainey, F. A. "Family V. Lachnospiraceae fam. nov." In Bergey's Manual of Systematic Bacteriology, Volume 3. 2nd Ed. New York: Springer, 2009, p. 921.
