

Influenza Virus B/Hong Kong/330/2001 Nucleoprotein Diverse Peptide

Catalog No. NR-36051

This reagent is the tangible property of the U.S. Government.

Product Description: NR-36051 is a peptide that represents one region of amino acid sequence diversity in the nucleoprotein (NP) of influenza virus B/Hong Kong/330/2001 (GenPept: AAT69437) compared to the NP of influenza virus B/Florida/4/2006 (GenPept: ACF54251; peptide array available as BEI Resources NR-36045). It also represents a sequence within influenza virus B/Hong Kong/330/2001 that could be recognized by CD4 T cells.

Lot: P595784-C

The following information applies to all peptides:

- Appearance White lyophilized powder
- Mass spectral analysis Correct MW by Electrospray or MALDI
- Counter Ion Trifluoroacetate

Peptide-specific information is shown in the two tables below.
