¹Quality control of HMP organisms used for DNA extraction is only performed to demonstrate that the material produced by BEI Resources is identical to the deposited material. It should not be considered a complete characterization of the deposited organism.

²The bacterial preparation used for extraction of genomic DNA was produced by culture of BEI Resources HM-260 (Lot 60326766). Genomic DNA was extracted using proprietary technology.

³7 days at 37°C and anaerobic atmosphere (80% N₂:10% CO₂:10% H₂)

⁴An extraction procedure was used that has been shown to consistently inactivate 100% of Gram-positive and Gram-negative bacteria.
