

Product Information Sheet for NR-28798

***Salmonella enterica* subsp. *enterica*,
Strain SL484 (CVM19515) (Serovar
Weltevreden)**

Catalog No. NR-28798

For research use only. Not for human use.

Contributor:

Mark K. Mammel, Microbiologist, Division of Molecular Biology, Office of Applied Research and Safety Assessment, Center for Food Safety and Applied Nutrition, U.S. Food and Drug Administration, Laurel, Maryland, USA

Manufacturer:

BEI Resources

Product Description:

Bacteria Classification: *Enterobacteriaceae*, *Salmonella*

Species: *Salmonella enterica*

Subspecies: *Salmonella enterica* subsp. *enterica*

Serovar: Weltevreden

Strain: SL484 (also referred to as strains CVM19515, HI_N05-537 and 102057)^{1,2}

Original Source: *Salmonella enterica* (*S. enterica*) subsp. *enterica*, strain SL484 was isolated in 2002 from scallops in Indonesia.¹

Comments: Strain SL484 is reported to be an antibiotic-susceptible strain.¹ The complete genome for *S. enterica* subsp. *enterica*, strain SL484 (HI_N05-537) was sequenced at the [J. Craig Venter Institute](#) (GenBank: [ABFF00000000](#)).¹

S. enterica are Gram-negative, rod-shaped, flagellated bacteria. The species is divided into six subspecies (I, II, IIIa, IIIb, IV, VI) where only subspecies I, subsp. *enterica*, is considered of clinical relevance.³ Salmonellosis (non-typhoidal), due to the greater than 1500 serovars of *S. enterica* subsp. *enterica*, is one of the most common food-borne diseases with approximately 1 million cases that occur in the United States every year.⁴ Pathogenicity results from a variety of virulence factors found in plasmids, prophages, and five pathogenicity islands which allow these organisms to colonize and infect host organisms.^{5,6}

S. enterica subsp. *enterica* serovar Weltevreden (formerly *Salmonella Weltevreden*) has been a dominant serovar associated with foodborne non-typhoidal Salmonellosis in Southeast Asian countries. In the U.S., serovar Weltevreden isolates are commonly found in seafood mainly from Thailand and Malaysia; however, human clinical cases in the U.S. are very rare. In contrast to the frequent occurrence of resistance observed among other serovars, a very low frequency of resistance has been shown among human isolates of *S. enterica* subsp. *enterica* serovar Weltevreden.⁷

The complete genome sequence of the 2007-60-3289-1

outbreak strain of *S. enterica* subsp. *enterica* serovar Weltevreden has been completed.⁸

Material Provided:

Each vial contains approximately 0.5 mL of bacterial culture in 0.5X Nutrient broth supplemented with 10% glycerol.

Note: If homogeneity is required for your intended use, please purify prior to initiating work.

Packaging/Storage:

NR-28798 was packaged aseptically, in screw-capped plastic cryovials. The product is provided frozen and should be stored at -60°C or colder immediately upon arrival. For long-term storage, the vapor phase of a liquid nitrogen freezer is recommended. Freeze-thaw cycles should be avoided.

Growth Conditions:

Media:

Tryptic Soy broth or Nutrient broth or equivalent

Tryptic Soy agar with 5% defibrinated sheep blood or Nutrient agar or equivalent

Incubation:

Temperature: 37°C

Atmosphere: Aerobic

Propagation:

1. Keep vial frozen until ready for use; then thaw.
2. Transfer the entire thawed aliquot into a single tube of broth.
3. Use several drops of the suspension to inoculate an agar slant and/or plate.
4. Incubate the tube, slant and/or plate at 37°C for 24 hours.

Citation:

Acknowledgment for publications should read "The following reagent was obtained through BEI Resources, NIAID, NIH: *Salmonella enterica* subsp. *enterica*, Strain SL484 (CVM19515) (Serovar Weltevreden), NR-28798."

Biosafety Level: 2

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the following publication: U.S. Department of Health and Human Services, Public Health Service, Centers for Disease Control and Prevention, and National Institutes of Health. Biosafety in Microbiological and Biomedical Laboratories. 5th ed. Washington, DC: U.S. Government Printing Office, 2009; see www.cdc.gov/biosafety/publications/bmbl5/index.htm.

Disclaimers:

You are authorized to use this product for research use only. It is not intended for human use.

Use of this product is subject to the terms and conditions of the BEI Resources Material Transfer Agreement (MTA). The MTA is available on our Web site at www.beiresources.org.

Product Information Sheet for NR-28798
