

Treponema denticola, Strain H-22

Catalog No. HM-571

Product Description: *Treponema denticola* (*T. denticola*), strain H-22 was isolated from a deep periodontal pocket in an adult human mouth in the United States.

Lot¹⁻³: 62782831

Manufacturing Date: 10SEP2014

TEST	SPECIFICATIONS	RESULTS
Phenotypic Analysis Cellular morphology Colony morphology ⁴ Motility (wet mount)	Spirochetes Report results Motile	Spirochetes No growth on agar ⁵ Motile
Genotypic Analysis Sequencing of 16S ribosomal RNA gene (~ 1430 base pairs)	≥ 99% identical to GenBank: AGDV01000021 (<i>T. denticola</i> , strain H-22)	≥ 99% identical to GenBank: AGDV01000021 (<i>T. denticola</i> , strain H-22)
Purity (post-freeze) Anaerobic growth ⁶ Aerobic growth ⁷	Growth consistent with <i>T. denticola</i> No growth	Growth consistent with <i>T. denticola</i> No growth
Viability (post-freeze)^{3,8}	Growth	Growth

¹Quality control of HMP material is only performed to demonstrate that the material distributed by BEI Resources is identical to the deposited material. It should not be considered a complete characterization of the deposited organism.

²*T. denticola*, strain H-22 (also referred to as F0457) was deposited by Jacques Izard, Assistant Member of the Staff, Department of Molecular Genetics, The Forsyth Institute, Boston, Massachusetts, USA. The deposited material was inoculated into tryptone-yeast extract-gelatin-volatile fatty acids-serum (TYGVS) medium and incubated for 7 days at 37°C in an anaerobic atmosphere (< 5% O₂; Remel™ Pack-Anaero™ R681001). The material from the initial growth was passaged once in TYGVS medium for 5 days at 37°C in an anaerobic atmosphere to produce this lot.

³Growth on agar is not recommended for *T. denticola*, strain H-22 and may not be reproducible.

⁴3 days at 37°C in an anaerobic atmosphere on Tryptic Soy agar with 5% defibrinated sheep blood

⁵Incubation times longer than 7 days may result in punctiform or discrete, circular, gray colonies.

⁶Purity of this lot was assessed for 7 days on Tryptic Soy agar with 5% defibrinated sheep blood at 37°C in an anaerobic atmosphere.

⁷Purity of this lot was assessed for 3 days on Tryptic Soy agar with 5% defibrinated sheep blood at 37°C in an aerobic atmosphere with 5%CO₂.

⁸3 days at 37°C in an anaerobic atmosphere in TYGVS medium

Date: 28 OCT 2014
