Certificate of Analysis for NR-19160

Streptococcus pneumoniae, Strain GA47179

Catalog No. NR-19160

Product Description: *Streptococcus pneumoniae* (*S. pneumoniae*), strain GA47179 was isolated in 2006 from the blood of a patient with otitis in Georgia, USA. *S. pneumoniae*, strain GA47179 was deposited as a member of serotype 15A.

Lot[1]: 62743345 **Manufacturing Date: 03JUL2014**

TEST	SPECIFICATIONS	RESULTS
Phenotypic Analysis		
Cellular morphology	Gram-positive cocci	Gram-positive cocci
Colony morphology[2]	Report results	Circular, umbilicate, undulate, smooth and gray (Figure 1)
Hemolysis on blood agar[2]	α-hemolytic	α-hemolytic
Motility (wet mount)	Report results	Non-motile
Catalase	Negative	Negative
VITEK® MS (MALDI-TOF)	Consistent with *S. pneumoniae*	Consistent with *S. pneumoniae*
Antibiotic Susceptibility Profile[3]		
Benzylpenicillin[4]	Sensitive	Sensitive (≤ 0.06 µg/mL)
Ciprofloxacin[5]	Report results	Resistant (16 µg/mL)
Levofloxacin[4]	Sensitive	Sensitive (≤ 2 µg/mL)
Gatifloxacin[5]	Report results	Sensitive (0.5 µg/mL)
Ofloxacin[4]	Report results	Inconclusive[6]
Erythromycin[4]	Resistant	Sensitive (≤ 0.5 µg/mL)[7]
Telithromycin[4]	Sensitive	Sensitive (≤ 0.25 µg/mL)
Clindamycin[5]	Resistant	Inconclusive[8]
Quinupristin/dalfopristin[5]	Sensitive	Sensitive (0.38 µg/mL)
Linezolid[4]	Sensitive	Sensitive (≤ 2 µg/mL)
Vancomycin[4]	Sensitive	Sensitive (≤ 1 µg/mL)
Tetracycline[4]	Resistant	Resistant (≥ 8 µg/mL)
Rifampicin[5]	Report results	Sensitive (0.047 µg/mL)
Trimethoprim/sulfamethoxazole[4]	Sensitive	Sensitive (≤ 10 µg/mL)
Amoxicillin[4]	Sensitive	Sensitive (≤ 0.06 µg/mL)
Meropenem[4]	Sensitive	Sensitive (≤ 0.06 µg/mL)
Cefotaxime[4]	Sensitive	Sensitive (≤ 0.06 µg/mL)
Cefuroxine[5]	Sensitive	Sensitive (0.25 µg/mL)
Cefaclor[5]	Report results	Intermediate (2 µg/mL)
Ceftriaxone[4]	Sensitive	Sensitive (≤ 0.06 µg/mL)
Chloramphenicol[4]	Sensitive	Sensitive (≤ 2 µg/mL)
Genotypic Analysis		
Sequencing of 16S ribosomal RNA gene (~ 830 base pairs)	Consistent with *S. pneumoniae*	Consistent with *S. pneumoniae*[9]
Riboprinter® Microbial Characterization System	Consistent with *S. pneumoniae*	Consistent with *S. pneumoniae*
Purity (post-freeze)[10]	Consistent with *S. pneumoniae*	Consistent with *S. pneumoniae*
Viability (post-freeze)[2]	Growth	Growth

[1] *S. pneumoniae*, strain GA47179 (also referred to as SPAR88) was deposited by Scott T. Chancey, Ph.D., Division of Infectious Diseases, Department of Medicine, Emory University, Atlanta, Georgia, USA. NR-19160 was produced by inoculation of the deposited material into Tryptic Soy broth and incubated for 21 hours at 37°C in an aerobic atmosphere with 5% CO_2. Broth inoculum was added to Tryptic Soy agar with 5% defibrinated sheep blood kolles which were grown 22 hours at 37°C in an aerobic atmosphere with 5% CO_2 to produce this lot.

[2] 24 hours at 37°C in an aerobic atmosphere with 5% CO_2 on Tryptic Soy agar with 5% defibrinated sheep blood

[3]Minimum Inhibitory Concentration (MIC); MIC Interpretation Guideline: CLSI M100-S22 (2012)
[4]Tested by VITEK® AST-GP74 card (VITEK® 2, version 5.04)
[5]Tested by bioMérieux E-test®: cefuroxime (catalog number 506958), ciprofloxacin (412310), clindamycin (412314), cefaclor (504550), gatifloxacin (530250), rifampicin (412449) and quinupristin/dalfopristin (528750)
[6]Results from multiple antibiotic susceptibility tests, completed on this lot of NR-19160, produced ofloxacin MICs between 1 µg/mL and 4 µg/mL, which indicates both sensitive and intermediate ofloxacin susceptibilities.
[7]*S. pneumoniae*, strain GA47179 was deposited as being resistant to erythromycin. Antibiotic susceptibility testing performed on this lot of NR-19160, in triplicate, determined that the erythromycin MIC was 0.25 µg/mL, which indicates sensitive susceptibility.
[8]*S. pneumoniae*, strain GA47179 was deposited as being resistant to clindamycin. Results from multiple antibiotic susceptibility tests, completed on this lot of NR-19160, produced clindamycin MICs between 0.25 µg/mL and 256 µg/mL, which indicates both sensitive and resistant clindamycin susceptibilities.
[9]100% identical to *S. pneumoniae*, strain GA47179 (GenBank: AIKX01000013.1)
[10]Purity of this lot was assessed for 7 days on Tryptic Soy agar with 5% defibrinated sheep blood at 37°C in an aerobic atmosphere with 5% CO_2.
