**Manufacturer:**
BEI Resources

**Product Description:**

**Bacteria Classification:** Bacteroidaceae, Bacteroides  
**Species:** Bacteroides uniformis  
**Strain:** CL03T00C23  
**Original Source:** Bacteroides uniformis (B. uniformis), strain CL03T00C23 was isolated from healthy adult human feces in Boston, Massachusetts, USA.¹  
**Comments:** B. uniformis, strain CL03T00C23 (HMP ID 1072) is a reference genome for The Human Microbiome Project (HMP). HMP is an initiative to identify and characterize human microbial flora. The complete genome of B. uniformis, strain CL03T00C23 was sequenced at the Broad Institute (GenBank: AGXX00000000).  
**Note:** HMP material is taxonomically classified by the depositor. Quality control of these materials is only performed to demonstrate that the material distributed by BEI Resources is identical to the deposited material.

B. uniformis is a strictly anaerobic, non-sporulating, Gram-negative rod usually isolated from the human distal gut.² It has been isolated on rare occasions from abdominal and bone infections.³,⁴

**Material Provided:**
Each vial contains approximately 0.5 mL of bacterial culture in Modified Chopped Meat medium supplemented with 10% glycerol.

**Note:** If homogeneity is required for your intended use, please purify prior to initiating work.

**Packaging/Storage:**
HM-715 was packaged aseptically in cryovials. The product is provided frozen and should be stored at -60°C or colder immediately upon arrival. For long-term storage, the vapor phase of a liquid nitrogen freezer is recommended. Freezethaw cycles should be avoided.

**Growth Conditions:**

**Media:** Modified Reinforced Clostridial broth or Modified Chopped Meat medium or equivalent  
**Incubation:** Tryptic Soy agar with 5% defibrinated sheep blood or equivalent  
**Temperature:** 37°C  
**Atmosphere:** Anaerobic  
**Propagation:**
1. Keep vial frozen until ready for use, then thaw.  
2. Transfer the entire thawed aliquot into a single tube of broth.  
3. Use several drops of the suspension to inoculate an agar slant and/or plate.  
4. Incubate the tube, slant and/or plate at 37°C for 48 to 72 hours.

**Citation:**

Acknowledgment for publications should read “The following reagent was obtained through BEI Resources, NIAID, NIH as part of the Human Microbiome Project: Bacteroides uniformis, Strain CL03T00C23, HM-715.”

**Biosafety Level:** 2

**Disclaimers:**

You are authorized to use this product for research use only. It is not intended for human use.

Use of this product is subject to the terms and conditions of the BEI Resources Material Transfer Agreement (MTA). The MTA is available on our Web site at [www.beiresources.org](http://www.beiresources.org).
