

**Macrophage Cell Line Derived from Wild Type Mice**

**Catalog No. NR-9456**

This reagent is the property of the U.S. Government.

**Product Description:** The murine macrophage cell line, NR-9456, was derived using primary bone marrow cells from wild type mice. The primary bone marrow cells were immortalized by infection with the ecotropic transforming replication-deficient retrovirus J2 using techniques described in the literature. Characterization based on immunofluorescence, stimulation assays and flow cytometry demonstrated that the immortalized cell line retains its macrophage-specific morphological, functional and surface expression properties.
