### Clostridium difficile, Isolate 20110961

### Catalog No. NR-49316

**Product Description:** Clostridium difficile (C. difficile; also referred to as Peptoclostridium difficile), isolate 20110961 was obtained from the stool of a young adult female patient with a community-associated (CA) C. difficile infection in midwestern USA, in 2011. Isolate 20110961 was deposited as PCR ribotype A12, North American pulsed-field gel electrophoresis type 10 (NAP10), containing *tcdA*, *tcdB* and *tcdC* of the PaLoc operon. This isolate is reported to be negative for the C. difficile binary toxin (CDT).

<sup>1</sup>NR-49316 was produced by inoculation of the deposited material into Modified Reinforced Clostridial medium and incubated for 1 day at 37°C in an anaerobic atmosphere (< 0.5% O<sub>2</sub>; Remel<sup>™</sup> Anaero Pack-Anaero<sup>™</sup> R681001). The material from the initial growth was passaged in Modified Reinforced Clostridial medium for 1 day at 37°C in an anaerobic atmosphere to produce this lot.

<sup>2</sup>2 days at 37°C in an anaerobic atmosphere on Tryptic Soy agar with 5% defibrinated sheep blood

<sup>3</sup>Tests were assessed after 7 days at 37°C in an anaerobic atmosphere. The gelatin tube was placed at 4°C for one hour prior to result determination.
