Capnocytophaga sputigena, Strain CC21_001D

Catalog No. HM-1037

For research use only. Not for human use.

Contributor: Emma Allen-Vercoe, Assistant Professor, Department of Molecular and Cellular Biology, University of Guelph, Guelph, Ontario, Canada

Manufacturer: BEI Resources

Product Description:
Bacteria Classification: Flavobacteriaceae, Capnocytophaga Species: Capnocytophaga sputigena Strain: CC21_001D

Original Source: Capnocytophaga sputigena (C. sputigena), strain CC21_001D was isolated in October 2010 from colonic biopsy tissue of a human subject in Victoria, British Columbia, Canada.

Comments: C. sputigena, strain CC21_001D (HMP ID 1200) is a reference genome for The Human Microbiome Project (HMP). HMP is an initiative to identify and characterize human microbial flora. The complete genome of C. sputigena, strain CC21_001D is currently being sequenced at the Broad Institute.

Note: HMP material is taxonomically classified by the depositor. Quality control of these materials is only performed to demonstrate that the material distributed by BEI Resources is identical to the deposited material.

C. sputigena is a capnophilic Gram-negative bacilli that is part of normal human oral flora. It has been reported to cause extra-oral infections in both immunocompetent and immunocompromised patients, including septicaemia, bacteremia, osteomyelitis, keratitis and chorioamnionitis. C. sputigena is susceptible to most antibiotics, although there are reports of strains with resistance to beta-lactams.

Material Provided:
Each vial contains approximately 0.5 mL of bacterial culture in Modified Chopped Meat medium supplemented with 10% glycerol.

Note: If homogeneity is required for your intended use, please purify prior to initiating work.

Packaging/Storage:
HM-1037 was packaged aseptically in cryovials. The product is provided frozen and should be stored at -60°C or colder immediately upon arrival. For long-term storage, the vapor phase of a liquid nitrogen freezer is recommended. Freeze-thaw cycles should be avoided.

Growth Conditions:

Media: Modified Chopped Meat medium or equivalent
Tryptic Soy agar with 5% defibrinated sheep blood or equivalent

Incubation:
Temperature: 37°C
Atmosphere: Anaerobic

Propagation:
1. Keep vial frozen until ready for use, then thaw.
2. Transfer the entire thawed aliquot into a single tube of broth.
3. Use several drops of the suspension to inoculate an agar slant and/or plate.
4. Incubate the tube, slant and/or plate at 37°C for 1 to 2 days

Citation:
Acknowledgment for publications should read “The following reagent was obtained through BEI Resources, NIAID, NIH as part of the Human Microbiome Project: Capnocytophaga sputigena, Strain CC21_001D, HM-1037.”

Biosafety Level: 1

Disclaimers:
You are authorized to use this product for research use only. It is not intended for human use.

Use of this product is subject to the terms and conditions of the BEI Resources Material Transfer Agreement (MTA). The MTA is available on our Web site at www.beiresources.org.

While BEI Resources uses reasonable efforts to include accurate and up-to-date information on this product sheet, neither ATCC® nor the U.S. Government makes any warranties or representations as to its accuracy.
