¹RD cells (ATCC[®] CCL-136™)

²Grown in Eagle's Minimum Essential Medium (ATCC[®] 30-2003™) supplemented with 2% fetal bovine serum (ATCC[®] 30-2020™) for 2 days at 33°C and 5% CO₂

³The Tissue Culture Infectious Dose 50% (TCID₅₀) endpoint is the 50% infectious endpoint in cell culture. The TCID₅₀ is the dilution of virus that under the conditions of the assay can be expected to infect 50% of the culture vessels inoculated, just as a Lethal Dose 50% (LD₅₀) is expected to kill half of the animals exposed. A reciprocal of the dilution required to yield the TCID₅₀ provides a measure of the titer (or infectivity) of a virus preparation.
