

***Mycobacterium tuberculosis* Gateway® Clone Set, Recombinant in *Escherichia coli*, Plate 12**

Catalog No. NR-19648

This reagent is the tangible property of the U.S. Government.

Product Description: The *Mycobacterium tuberculosis* (*M. tuberculosis*), Gateway® clone set consists of 42 plates which contain 3724 validated clones (3294 *M. tuberculosis*, strain H37Rv clones supplemented with 430 unique open reading frames (ORF) from *M. tuberculosis*, strain CDC1551) cloned in *Escherichia coli* DH10B-T1 cells.

Note: Production in the 96-well format has increased risk of cross-contamination between adjacent wells. Individual clones should be purified (e.g. single colony isolation and purification using good microbiological practices) and sequence-verified prior to use. BEI Resources cannot confirm or validate any clone not identified on the plate information table found on the Product Sheet.

Lot¹: 59511543

Manufacturing Date: 28OCT2010

TEST	SPECIFICATIONS	RESULTS
Viability (post-freeze) ²	Report results	Growth from inoculated wells
Purity (post-freeze) ²	Report results	All wells with growth consistent with <i>Escherichia coli</i>

¹18 hours at 37°C and aerobic atmosphere on Luria Bertani agar with 50 µg/mL kanamycin.

²22 hours under propagation conditions

Date: 12 DEC 2012
