<sup>1</sup>NR-50190, lot 63910611, was produced by incubation of seed material in modified Sabouraud Dextrose medium and incubated for 3 days at 25°C in an aerobic atmosphere. Yeast were harvested from agar plates with 20% glycerol prior to vialing.

<sup>2</sup>2 days at 25°C in an aerobic atmosphere on modified Sabouraud Dextrose agar

<sup>3</sup>5 days at 26°C in an aerobic atmosphere. CGB medium differentiates *C. gattii* from *C. neoformans* based on the ability of *C. gattii* isolates to grow in the presence of L-canavanine and to assimilate glycine as a sole carbon source, resulting in a blue color. *C. neoformans* isolates will show yellow to light-green on CGB medium. [McTaggart, L., et al. "Rapid Identification of *Cryptococcus neoformans* var. *grubii*, *C. neoformans* var. *neoformans*, and *C. gattii* by Use of Rapid Biochemical Tests, Differential Media, and DNA Sequencing." *J. Clin. Microbiol.* 2011 (49): 2522-2527. PubMed: 21593254.]

<sup>4</sup>Clarity of broth was determined by visual inspection after 7 days at 25°C and 37°C in an aerobic atmosphere.
