

***Bacillus cereus*, Strain MSX-A1**

Catalog No. NR-22166

For research use only. Not for human use.

Contributor:

Jacques Mahillon, Professor, Department of Microbiology
Catholic University of Louvain, Louvain-la-Neuve, Belgium

Manufacturer:

BEI Resources

Product Description:

Bacteria Classification: *Bacillaceae*, *Bacillus*

Species: *Bacillus cereus* (also referred to as *Bacillus cereus*
Group 17 (BCG17)¹)

Strain: MSX-A1

Original Source: *Bacillus cereus* (*B. cereus*), strain MSX-A1
was isolated in 2004 from an air sample collected in
Antarctica.²

Comments: *B. cereus*, strain MSX-A1 is part of a *Bacillus*
cereus Database Sequencing Project at the [Broad Institute](#).
The complete genome sequence of *B. cereus*, strain MSX-
A1 is available (GenBank: [AHEO01000000](#)).

B. cereus is a Gram-positive, spore-forming, facultative
aerobe. This organism is a ubiquitous opportunistic pathogen
that can cause food poisoning in infected individuals. There
are two forms of food poisoning that occur. The early onset
(emetic) disease is caused by a small, stable
dodecadepsipeptide cerulide³ whereas the late onset
(diarrheal) disease is caused by heat-labile enterotoxins.⁴
Genetic and genomic analyses have revealed that the
chromosome of *B. cereus* is very similar to *B. anthracis*.⁵

Clinical and environmental isolates of *B. cereus* containing
large plasmids that share a common backbone with *B.*
anthracis pXO1 and pXO2, have been identified.^{6,7} The
pXO1-like plasmid has demonstrated significant homology to
B. anthracis pXO1 and harbors the entire anthrax toxin
biosynthetic complex.⁷ The pXO2-like plasmid contains genes
capable of capsule production, however, they are not
homologous to the *B. anthracis* capsule genes found on
pXO2.⁸

Material Provided:

Each vial contains approximately 0.5 mL of bacterial culture in
Tryptic Soy broth supplemented with 10% glycerol.

Note: If homogeneity is required for your intended use, please
purify prior to initiating work.

Packaging/Storage:

NR-22166 was packaged aseptically in screw-capped plastic
cryovials. The product is provided frozen and should be stored
at -60°C or colder immediately upon arrival. For long-term
storage, the vapor phase of a liquid nitrogen freezer is
recommended. Freeze-thaw cycles should be avoided.

Growth Conditions:

Media:

Tryptic Soy broth or Nutrient broth or equivalent
Tryptic Soy agar or Tryptic Soy agar with 5% defibrinated
sheep blood or Nutrient agar or equivalent

Incubation:

Temperature: 28°C to 37°C

Atmosphere: Aerobic

Propagation:

1. Keep vial frozen until ready for use, then thaw.
2. Transfer the entire thawed aliquot into a single tube of
broth.
3. Use several drops of the suspension to inoculate an agar
slant and/or plate.
4. Incubate the tube, slant and/or plate at 37°C for 1 to 2
days.

Citation:

Acknowledgment for publications should read “The following
reagent was obtained through BEI Resources, NIAID, NIH:
Bacillus cereus, Strain MSX-A1, NR-22166.”

Biosafety Level: 2

Appropriate safety procedures should always be used with this
material. Laboratory safety is discussed in the following
publication: U.S. Department of Health and Human Services,
Public Health Service, Centers for Disease Control and
Prevention, and National Institutes of Health. Biosafety in
Microbiological and Biomedical Laboratories. 5th ed.
Washington, DC: U.S. Government Printing Office, 2009; see
www.cdc.gov/biosafety/publications/bmb15/index.htm.

Disclaimers:

You are authorized to use this product for research use only.
It is not intended for human use.

Use of this product is subject to the terms and conditions of
the BEI Resources Material Transfer Agreement (MTA). The
MTA is available on our Web site at www.beiresources.org.

While BEI Resources uses reasonable efforts to include
accurate and up-to-date information on this product sheet,
neither ATCC® nor the U.S. Government makes any
warranties or representations as to its accuracy. Citations
from scientific literature and patents are provided for
informational purposes only. Neither ATCC® nor the U.S.
Government warrants that such information has been
confirmed to be accurate.

This product is sent with the condition that you are responsible
for its safe storage, handling, use and disposal. ATCC® and
the U.S. Government are not liable for any damages or injuries
arising from receipt and/or use of this product. While
reasonable effort is made to ensure authenticity and reliability
of materials on deposit, the U.S. Government, ATCC®, their
suppliers and contributors to BEI Resources are not liable for
damages arising from the misidentification or
misrepresentation of products.

Use Restrictions:

This material is distributed for internal research, non-commercial purposes only. This material, its product or its derivatives may not be distributed to third parties. Except as performed under a U.S. Government contract, individuals contemplating commercial use of the material, its products or its derivatives must contact the contributor to determine if a license is required. U.S. Government contractors may need a license before first commercial sale.
