Thomas G. Blanchard, Ph.D., J.D., Associate Professor, University of Maryland School of Medicine, Baltimore, Maryland, USA and Steven J. Czinn, M.D., Professor, Chair, Department of Pediatrics, University of Maryland School of Medicine, Baltimore, Maryland, USA

**Manufacturer:**
BEI Resources

**Product Description:**

- **Bacteria Classification:** Helicobacteraceae, Helicobacter
- **Species:** Helicobacter pylori
- **Strain:** Hp H-43

**Original Source:** Helicobacter pylori (H. pylori), strain Hp H-43 was isolated from gastric biopsy homogenate of a patient with a duodenal ulcer in Ohio, USA. H. pylori is a microaerophilic, Gram-negative, nonsporulating, spiral-shaped and flagellated rod commonly found in the human stomach, present in about half of the world population. It is an opportunistic pathogen linked to diseases of the upper gastrointestinal tract including: gastric and duodenal ulcers, chronic gastritis, and stomach cancer. H. pylori infections are difficult to cure and successful treatment generally requires the administration of several antibacterial agents simultaneously.

**Material Provided:**
Each vial contains approximately 0.5 mL of bacterial culture in Brucella broth supplemented with 10% glycerol.

**Packaging/Storage:**
NR-43668 was packaged aseptically in cryovials. The product is provided frozen and should be stored at -60°C or colder immediately upon arrival. For long-term storage, the vapor phase of a liquid nitrogen freezer is recommended. Freeze-thaw cycles should be avoided.

**Growth Conditions:**

- **Media:**
  - Tryptic Soy broth or Brain Heart Infusion broth or Brucella broth or equivalent
  - Tryptic Soy agar or Tryptic Soy agar with 5% defibrinated sheep blood or Brucella agar or Columbia agar with 7% defibrinated horse blood, 5 µg/mL trimethoprim, 5 µg/mL vancomycin, 10 µg/mL cefsulodin and 2.5 µg/mL amphotericin B or equivalent

**Incubation:**
- Temperature: 37°C
- Atmosphere: Microaerophilic (~ 6-16% O₂ and 2-10% CO₂)

**Propagation:**
1. Keep vial frozen until ready for use, then thaw.
2. Transfer the entire thawed aliquot into a single tube of broth.
3. Use several drops of the suspension to inoculate an agar slant and/or plate.
4. Incubate the tube, slant and/or plate at 37°C for 48 to 72 hours.

**Citation:**
Acknowledgment for publications should read “The following reagent was obtained through BEI Resources, NIAID, NIH: Helicobacter pylori, Strain Hp H-43, NR-43668.”

**Biosafety Level:** 2
