

Porphyromonas gingivalis, Strain F0566

Catalog No. HM-1141

Product Description: *Porphyromonas gingivalis* (*P. gingivalis*), strain F0566 was isolated in October 1987 from the tooth of a patient diagnosed with moderate periodontitis in the United States.

Lot^{1,2}: 63359851

Manufacturing Date: 06MAR2015

TEST	SPECIFICATIONS	RESULTS
Phenotypic Analysis Cellular morphology Colony morphology ³ Motility (wet mount)	Gram-negative, pleomorphic rods Report results Report results	Gram-negative coccobacilli to bacilli Circular, convex, entire, smooth and gray (Figure 1) Non-motile
Genotypic Analysis Sequencing of 16S ribosomal RNA gene (~ 1480 base pairs)	≥ 99% identical to GenBank AWVD01000111 (<i>P. gingivalis</i> , strain F0566)	≥ 99% identical to GenBank AWVD01000111 (<i>P. gingivalis</i> , strain F0566)
Purity (post-freeze) Anaerobic growth ⁴ Aerobic growth ⁵	Growth consistent with <i>P. gingivalis</i> No growth	Growth consistent with <i>P. gingivalis</i> No growth
Viability (post-freeze)³	Growth	Growth

¹Quality control of HMP material is only performed to demonstrate that the material distributed by BEI Resources is identical to the deposited material. It should not be considered a complete characterization of the deposited organism.

²*P. gingivalis*, strain F0566 was deposited by Floyd E. Dewhirst, D.D.S., Ph.D., Senior Member of the Staff, Department of Microbiology and Jacques Izzard, Assistant Member of the Staff, Department of Molecular Genetics, The Forsyth Institute, Cambridge, Massachusetts, USA. HM-1141 was produced by inoculation of the deposited material into Supplemented Tryptic Soy broth and incubated for 24 hours at 37°C in an anaerobic atmosphere (< 5% O₂; Remel™ Pack-Anaero™). The material from the initial growth was passaged once in Supplemented Tryptic Soy broth for 48 hours at 37°C in an anaerobic atmosphere to produce this lot.

³70 hours at 37°C in an anaerobic atmosphere on Tryptic Soy agar with 5% defibrinated sheep blood

⁴Purity of this lot was assessed for 7 days on Tryptic Soy agar with 5% defibrinated sheep blood at 37°C in an anaerobic atmosphere.

⁵Purity of this lot was assessed for 7 days on Tryptic Soy agar with 5% defibrinated sheep blood at 37°C in an aerobic atmosphere with 5% CO₂.
