¹NR-50427 was produced by inoculation of the deposited material onto Yeast Mold agar and incubated for 5 days at 25°C in an aerobic atmosphere. Cells were harvested from agar with 20% glycerol.

²3 days at 25°C in an aerobic atmosphere on modified Sabouraud Dextrose agar

³2 days at 26°C in an aerobic atmosphere. CGB medium differentiates *C. gattii* from *C. neoformans* based on the ability of *C. gattii* isolates to grow in the presence of L-canavanine and to assimilate glycine as a sole carbon source, resulting in a blue color. *C. neoformans* isolates will remain yellow to light green on CGB medium [McTaggart, L., et al. "Rapid Identification of *Cryptococcus neoformans* var. *grubii*, *C. neoformans* var. *neoformans*, and *C. gattii* by Use of Rapid Biochemical Tests, Differential Media, and DNA Sequencing." *J. Clin. Microbiol.* 49 (2011): 2522-2527. PubMed: 21593254.].

⁴2 days at 35°C in an aerobic atmosphere on RPMI 1640 agar with MOPS and 2% glucose (Remel R04067)
