

Mycobacterium heraklionense*, Strain GN-1T*Catalog No. NR-49082**

Product Description: *Mycobacterium heraklionense* (*M. heraklionense*), strain GN-1T is a clinical isolate collected in 2002 from sputum of a 74-year old male in Greece.

Lot¹: 64362424**Manufacturing Date:** 02AUG2016

| TEST | SPECIFICATIONS | RESULTS |
|---|--|--|
| Phenotypic Analysis^{2,3} | | |
| Cellular morphology | Rods | Rods |
| Colony morphology ⁴ | Report results | Circular, low convex, entire, smooth and cream (Figure 1) |
| Growth rate | ≥ 7 days | 11 days |
| Growth at 45°C | Negative | Negative |
| Growth at 55°C | Report results | Negative |
| Acid-fast stain | Positive (red colonies) | Positive (red colonies) |
| Pigmentation in the dark (Scotochromogen) | Negative (no pigment) | Negative (no pigment) |
| Photoinduction for 1 hour (Photochromogen) | Negative (no pigment) | Negative (no pigment) |
| Nonchromogen (no pigment) | Positive | Positive |
| Biochemical tests | | |
| Catalase | Report results | Positive |
| Catalase (semiquantitative) | Positive | Positive |
| Catalase (68°C) | Positive | Positive |
| Iron uptake | Report results | Negative |
| Nitrate reduction | Positive | Negative⁵ |
| Tween 80 hydrolysis | Positive | Positive |
| Urease | Negative | Negative |
| Growth in the presence of 5% sodium chloride | Report results | Negative |
| Growth in the presence of thiophene-2-carboxylic acid hydrazide (TCH) | Positive | Positive |
| Genotypic Analysis | | |
| Sequencing of 16S ribosomal RNA gene (~1430 base pairs) | ≥ 99% sequence identity to <i>M. heraklionense</i> type strain (GenBank: GU084182.2) | 100% sequence identity to <i>M. heraklionense</i> type strain ⁷ (GenBank: GU084182.2) |
| Digital DNA-DNA hybridization (dDDH) ⁶ | ≥ 70% for species identification | Not determined ^{8,9} (Table 1) |
| Purity (post-freeze) | | |
| Middlebrook 7H10 agar with OADC enrichment ¹⁰ | Growth consistent with expected colony morphology | Growth consistent with expected colony morphology |
| Tryptic Soy agar ¹⁰ | Report results | Growth consistent with expected colony morphology |
| Viability (post-freeze)³ | Growth | Growth |

¹NR-49082 was produced by inoculation of the deposited material into Middlebrook 7H9 broth with ADC enrichment and grown for 14 days at 37°C in an aerobic atmosphere with 5% CO₂. Broth inoculum was added to Middlebrook 7H10 agar with OADC enrichment kolles, which were grown for 7 days at 37°C in an aerobic atmosphere with 5% CO₂ to produce this lot.

²Information on Mycobacterium testing is available from Ribón, W. "Biochemical Isolation and Identification of Mycobacteria." *Biochemical Testing*. (2012) Jose C. Jimenez-Lopez (Ed.), InTech, <http://www.intechopen.com/books/biochemical-testing/biochemical-isolation-and-identification-of-mycobacteria> and Lévy-Frébault, V. V. and F. Portaels. "Proposed Minimal Standards for the Genus *Mycobacterium* and for Description of New Slowly Growing *Mycobacterium* Species." *Int. J. Syst. Bacteriol.* 42 (1992): 315-323. PubMed: 1581193.

³Phenotypic characterization of *M. heraklionense* was performed following Tortoli, E., et al. "Survey of 150 Strains Belonging to the *Mycobacterium terrae* Complex and Description of *Mycobacterium engbaekii* sp. nov., *Mycobacterium heraklionense* sp. nov. and *Mycobacterium heraklionense* sp. nov." *Int. J. Syst. Evol. Microbiol.* 63 (2013): 401-411. PubMed: 22447702.

⁴11 days at 37°C in an aerobic atmosphere with 5% CO₂ on Middlebrook 7H10 agar with OADC enrichment

⁵NR-49082 was deposited as *M. heraklionense* and reported to be positive for nitrate reduction. Testing performed in triplicate by BEI Resources indicates a negative result.

⁶Relatedness between bacterial strains has traditionally been determined using DDH. For additional information, refer to Auch, A.F., et al. "Digital DNA-DNA Hybridization for Microbial Species Delineation by Means of Genome-to-Genome Sequence Comparison." *Stand. Genomic Sci.* 2 (2010):

117-134. PubMed: 21304684.

⁷*M. heraklionense*, strain GN-1T is also referred to as strain NCTC 13432^T (Tortoli, E., et al. "Survey of 150 Strains Belonging to the *Mycobacterium terrae* Complex and Description of *Mycobacterium engbaekii* sp. nov., *Mycobacterium heraklionense* sp. nov. and *Mycobacterium longobardum* sp. nov." *Int. J. Syst. Evol. Microbiol.* 63 (2013): 401-411. PubMed: 22447702.).

⁸The whole genome of *M. heraklionense*, strain GN-1T (Contig Total Length ~ 5.0 megabase pairs) was sequenced using the Illumina® MiSeq® system and was assembled and analyzed with CLC Genomics Workbench Version 7.0.2.

⁹The required whole genome sequence for the type strain of this species is not available. dDDH testing rules out all species listed in Table 1, however, this does not rule out species for which the type strains whole genome sequences are not available.

¹⁰Purity of this lot was assessed for 11 days at 37°C in an aerobic atmosphere with 5% CO₂.
