Certificate of Analysis for NR-49707

Dengue Virus Type 1, UIS 1162

Catalog No. NR-49707

Product Description: Cell lysate and supernatant from *Aedes albopictus* mosquito larval clone C6/36 cells[1] infected with dengue virus type 1 (DEN-1), UIS 1162

Passage History: C1/C3 (Prior to deposit at BEI Resources/BEI Resources); C# = Number of passages in C6/36 cells[2]

Lot[3]: 2047 **Manufacturing Date: 20DEC2016**

TEST	SPECIFICATIONS	RESULTS
Identification by Infectivity Using C6/36 Cells[1]	Report results	Cell rounding, sloughing and syncytia formation
Identification by Indirect Fluorescent Antibody (IFA) Assay[4]	Fluorescence observed	Fluorescence observed
Sequencing of Species-Specific Region (878 nucleotides)	Consistent with DEN-1	Consistent with DEN-1[5]
Titer by $TCID_{50}$ Assay[6,7] in C6/36 Cells[1] with IFA Readout[4]	Report results	2.8×10^7 $TCID_{50}$ per mL
Amplification of Dengue Virus Sequence by RT-PCR	~ 1000 bp amplicon	~ 1000 bp amplicon
Sterility (21-day incubation)		
Harpo's HTYE broth[8], 37°C and 26°C, aerobic	No growth	No growth
Trypticase soy broth, 37°C and 26°C, aerobic	No growth	No growth
Sabouraud broth, 37°C and 26°C, aerobic	No growth	No growth
Sheep blood agar, 37°C, aerobic	No growth	No growth
Sheep blood agar, 37°C, anaerobic	No growth	No growth
Thioglycollate broth, 37°C, anaerobic	No growth	No growth
DMEM with 10% FBS, 37°C and 5% CO_2	No growth	No growth
Mycoplasma Contamination		
Agar and broth culture (14-day incubation at 37°C)	None detected	None detected
DNA detection by PCR of extracted Test Article nucleic acid	None detected	None detected

[1]*Aedes albopictus* clone C6/36 cells (ATCC® CRL-1660™)

[2]The first viral passage at BEI Resources was performed by polyethylenimine (Polyplus-transfection® SA jetPEI® 101-10)-mediated transfection of extracted viral nucleic acid in order to remove contaminating mycoplasma.

[3]Grown in Eagle's Minimum Essential Medium containing Earle's Balanced Salt Solution, non-essential amino acids, 2 mM L-glutamine, 1 mM sodium pyruvate and 1.5 g/L of sodium bicarbonate (ATCC® 30-2003) supplemented with 2% fetal bovine serum (ATCC® 30-2020) for 7 days at 28°C with 5% CO_2.

[4]Using Anti-Dengue Virus Complex Antibody (Millipore MAB8705)

[5]Sequence information for DEN-1, UIS 1162 is not available in the NCBI database; nucleotide sequence obtained for NR-49707, Lot No. 2047 is ~ 99% identical to numerous contemporaneous South American DEN-1 strains.

[6]The Tissue Culture Infectious Dose 50% ($TCID_{50}$) endpoint is the 50% infectious endpoint in cell culture. The $TCID_{50}$ is the dilution of virus that under the conditions of the assay can be expected to infect 50% of the culture vessels inoculated, just as a Lethal Dose 50% (LD_{50}) is expected to kill half of the animals exposed. A reciprocal of the dilution required to yield the $TCID_{50}$ provides a measure of the titer (or infectivity) of a virus preparation.

[7]9 days at 28°C and 5% CO_2
