**Product Information Sheet for NR-41899**

*Klebsiella pneumoniae*, Strain BWH 22

Catalog No. NR-41899

For research use only. Not for human use.

**Contributor:**
Andrew B. Onderdonk, Ph.D., Director, Clinical Microbiology, Department of Pathology, Brigham and Women’s Hospital, Boston, Massachusetts, USA

**Manufacturer:**
BEI Resources

**Product Description:**

**Bacteria Classification:** Enterobacteriaceae, Klebsiella

**Species:** Klebsiella pneumoniae

**Strain:** BWH 22

**Original Source:** Klebsiella pneumoniae (K. pneumoniae), strain BWH 22 was isolated in 2012 from human urine in Boston, Massachusetts, USA.¹

**Comments:** *K. pneumoniae*, strain BWH 22 was deposited as a carbapenem-resistant strain and is part of a Carbapenem-Resistant Enterobacteriaceae (CRE) Sequencing Project at the Broad Institute.¹² Strain BWH 22 was deposited as resistant to meropenem, positive for *bla*KPC-2 and *bla*TEM-1, MLST sequence type (ST) 258 and capsular polysaccharide (cps) clade.¹² The complete genome of *K. pneumoniae*, strain BWH 22 has been sequenced (GenBank: [JCN000000000].)

*K. pneumoniae* is a Gram-negative enterobacterium that is a major cause of nosocomial infections of the urinary and respiratory tracts. Due to the extensive spread of antibiotic-resistant strains, especially of extended-spectrum β-lactamase (ESBL)-producing strains, there has been renewed interest in *Klebsiella* infections.³

**Material Provided:**
Each vial contains approximately 0.5 mL of bacterial culture in Tryptic Soy broth supplemented with 10% glycerol.

**Note:** If homogeneity is required for your intended use, please purify prior to initiating work.

**Packaging/Storage:**
NR-41899 was packaged aseptically in cryovials. The product is provided frozen and should be stored at -60°C or colder immediately upon arrival. For long-term storage, the vapor phase of a liquid nitrogen freezer is recommended. Freeze-thaw cycles should be avoided.

**Growth Conditions:**

**Media:**
-
Tryptic Soy broth or Nutrient broth or equivalent
Tryptic Soy agar or Tryptic Soy agar with 5% defibrinated sheep blood or Nutrient agar or equivalent

**Incubation:**
Temperature: 37°C

Atmosphere: Aerobic

**Propagation:**
1. Keep vial frozen until ready for use, then thaw.
2. Transfer the entire thawed aliquot into a single tube of broth.
3. Use several drops of the suspension to inoculate an agar slant and/or plate.
4. Incubate the tube, slant and/or plate at 37°C for 1 day.

**Citation:**
Acknowledgment for publications should read “The following reagent was obtained through BEI Resources, NIAID, NIH: Klebsiella pneumoniae, Strain BWH 22, NR-41899.”

**Biosafety Level:**
2

**Disclaimers:**
You are authorized to use this product for research use only. It is not intended for human use.

Use of this product is subject to the terms and conditions of the BEI Resources Material Transfer Agreement (MTA). The MTA is available on our Web site at [www.beiresources.org](http://www.beiresources.org).
