

### **Monoclonal Anti-Junin Virus, Clone JB02-BF08 (immunoglobulin G, Mouse)**

#### **Catalog No. NR-2579**

This reagent is the property of the U.S. Government.

#### **For research use only. Not for human use.**

##### **Contributor:**

NIH Biodefense and Emerging Infections Research Resources Repository, NIAID, NIH

##### **Product Description:**

Mouse monoclonal antibody reactive with the nucleoprotein of Junin virus<sup>1</sup> was purified from mouse ascites by protein A affinity chromatography.

**Note:** The antibody class of the hybridoma from which NR-2579 was derived has been reported to be IgG3.<sup>1</sup> Results from BEI Resources indicate that the antibody class of the hybridoma is IgG1. The purified mouse ascites preparation (NR-2579, lot 4874364) contains both IgG1 and IgG2a.

##### **Material Provided:**

Each vial of NR-2579 contains approximately 1 mg of purified monoclonal antibody in 0.02 M potassium phosphate buffer (pH 7.2) containing 0.15 M sodium chloride and 0.02% (w/v) sodium azide. The concentration, expressed as mg per mL, is shown on the Certificate of Analysis.

##### **Packaging/Storage:**

NR-2579 was packaged aseptically in glass serum vials and is provided frozen. NR-2579 may be stored undiluted at 4°C for several weeks. It should not be diluted until immediately prior to use. For long-term storage, NR-2579 should be aliquoted and stored at -20°C or colder. Freeze-thaw cycles should be avoided.

##### **Biosafety Level: 1**

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the following publication: U.S. Department of Health and Human Services, Public Health Service, Centers for Disease Control and Prevention, and National Institutes of Health. Biosafety in Microbiological and Biomedical Laboratories. 5th ed. Washington, DC: U.S. Government Printing Office, 2007; see [www.cdc.gov/od/ohs/biosfty/bmb15/bmb15toc.htm](http://www.cdc.gov/od/ohs/biosfty/bmb15/bmb15toc.htm).
