[1]*Y. pestis*, strain Kimberley(D12) was deposited by Professor Robert R. Brubaker of the Department of Microbiology and Molecular Genetics at Michigan State University, East Lansing, Michigan. The bacterial preparation used for extraction of genomic DNA was produced by broth (Tryptic Soy Broth; BD 211768) culture of the deposited material. After incubation for 48 hours at 28°C and aerobic atmosphere, genomic DNA was extracted using proprietary technology.
[2]Also consistent with other *Yersinia* species
[3]7 days at 28°C in an aerobic atmosphere
[4]An extraction procedure was used that has been shown to consistently inactivate 100% of Gram-negative bacteria.
