**Listeria monocytogenes**, Strain Li 22

**Catalog No. NR-108**  
(Derived from ATCC® 19113™)

For research only. Not for human use.

**Contributor:**  
ATCC®

**Manufacturer:**  
BEI Resources

**Product Description:**

**Bacteria Classification:** Listeriaceae, Listeria  
**Species:** Listeria monocytogenes  
**Strain:** Li 22 (also referred to as N40 and NCTC 5105)¹  
**Serotype:** 3a  
**Original Source:** Listeria monocytogenes (L. monocytogenes), strain Li 22 was isolated in 1937 from a human in Denmark.²  
**Comment:** L. monocytogenes, strain Li 22 was deposited as non-hemolytic.

*L. monocytogenes* is a Gram-positive, facultative intracellular bacterium that is extremely tolerant of external stresses (pH 3 to 12, temperatures ranging from 1°C to 45°C and high salt). *L. monocytogenes* encompasses a diversity of strains with varied virulence and pathogenic potential. There are 13 serotypes (1/2a, 1/2b, 1/2c, 3a, 3b, 3c, 4a, 4b, 4c, 4d, 4e, 5 and 7) that have been isolated from mammalian, bird, fish and shellfish species as well as environmental sources. Of these, only 3 serotypes (1/2a, 1/2b and 4b) are frequently isolated from outbreaks of human listeriosis. The most common cause of infection is through ingestion of contaminated foods, in particular milk, meat or vegetable products. The infective dose is unknown and varies with species.³

**Material Provided:**

Each vial contains approximately 0.5 mL of bacterial culture in Brain Heart Infusion broth supplemented with 10% glycerol.

**Note:** If homogeneity is required for your intended use, please purify prior to initiating work.

**Packaging/Storage:**

NR-108 was packaged aseptically, in screw-capped plastic cryovials. The product is provided frozen and should be stored at -60°C or colder immediately upon arrival. For long-term storage, the vapor phase of a liquid nitrogen freezer is recommended. Freeze-thaw cycles should be avoided.

**Growth Conditions:**

**Media:**  
Brain Heart Infusion broth or equivalent  
Brain Heart Infusion agar or Sheep Blood agar or equivalent

**Incubation:**  
Temperature: 37°C

**Atmosphere:** Aerobic

**Propagation:**

1. Keep vial frozen until ready for use, then thaw.  
2. Transfer the entire thawed aliquot into a single tube of broth.  
3. Use several drops of the suspension to inoculate an agar slant and/or plate.  
4. Incubate the tubes and plate at 37°C for 1 day.
