

***Anopheles coluzzii*, Strain QUAS-CD8:GFP, Eggs**

Catalog No. MRA-1301

This reagent is the tangible property of the U.S. Government.

For research use only. Not for human use.

Contributor:

Christopher J. Potter, Ph.D., Associate Professor, Department of Neuroscience, Johns Hopkins University School of Medicine, Baltimore, Maryland, USA

Manufacturer:

Centers for Disease Control and Prevention (CDC), Atlanta, Georgia, USA

Product Description:

Classification: Culicidae, *Anopheles*

Species: *Anopheles coluzzii* (formerly, *Anopheles gambiae* M form)¹

Strain: QUAS-CD8:GFP

Original Source: The *Anopheles coluzzii* (*An. coluzzii*) colony originated in Ngousso, Cameroon.²

Comments: *An. coluzzii*, strain QUAS-CD8:GFP is a new transgenic strain utilizing the binary expression system QF-QUAS (Q-system).^{2,4} The strain was produced using a piggyBac vector containing cyan fluorescent protein (CFP) under control of the synthetic eye promoter 3xP3. QUAS is an enhancer element for the transcriptional activator QF2, originally from *Neurospora crassa* (fungus). Strain QUAS-CD8:GFP is an effector construct that contains 15 copies of the QUAS sequence, enhancing expression of even weak promoters, as well as mouse CD8, a single-pass membrane protein, fused to green fluorescent protein (GFP) to allow membrane-targeted visualization. This transgenic line can be used in combination with promoter-QF2 driver constructs to express CD8:GFP in specific tissues.

Note: MRA-1301 is a Q-system effector line, and must be crossed with a Q-system driver line for tissue-specific gene expression. MRA-1301 can be crossed with MRA-1300.

Material Provided:

MRA-1301 contains a suitable number of eggs to establish a stock. Eggs are provided on damp filter paper and should be hatched immediately upon receipt.

Packaging/Storage:

MRA-1301 is prepared and shipped by CDC. The product is provided at room temperature and should be kept at 24°C-30°C and 50-80% relative humidity until hatched.²

Growth Conditions:

Standard *An. coluzzii* rearing methods are recommended.^{2,5} Mosquitoes should be reared in a pathogen-free insectary with 10% sucrose available, and allowed to feed on a live animal (mouse) to propagate the strain.²

Citation:

Acknowledgment for publications should read "The following reagent was obtained through BEI Resources, NIAID, NIH: *Anopheles coluzzii*, Strain QUAS-CD8:GFP, Eggs, MRA-1301, contributed by Christopher J. Potter."

Biosafety Level: 1

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the following publication: U.S. Department of Health and Human Services, Public Health Service, Centers for Disease Control and Prevention, and National Institutes of Health. Biosafety in Microbiological and Biomedical Laboratories. 5th ed. Washington, DC: U.S. Government Printing Office, 2009; see www.cdc.gov/biosafety/publications/bmb15/index.htm.

Disclaimers:

You are authorized to use this product for research use only. It is not intended for human use.

Use of this product is subject to the terms and conditions of the BEI Resources Material Transfer Agreement (MTA). The MTA is available on our Web site at www.beiresources.org.

While BEI Resources uses reasonable efforts to include accurate and up-to-date information on this product sheet, neither ATCC® nor the U.S. Government makes any warranties or representations as to its accuracy. Citations from scientific literature and patents are provided for informational purposes only. Neither ATCC® nor the U.S. Government warrants that such information has been confirmed to be accurate.

This product is sent with the condition that you are responsible for its safe storage, handling, use and disposal. ATCC® and the U.S. Government are not liable for any damages or injuries arising from receipt and/or use of this product. While reasonable effort is made to ensure authenticity and reliability of materials on deposit, the U.S. Government, ATCC®, their suppliers and contributors to BEI Resources are not liable for damages arising from the misidentification or misrepresentation of products.

Use Restrictions:

This material is distributed for internal research, non-commercial purposes only. This material, its product or its derivatives may not be distributed to third parties. Except as performed under a U.S. Government contract, individuals contemplating commercial use of the material, its products or its derivatives must contact the contributor to determine if a license is required. U.S. Government contractors may need a license before first commercial sale.
