Enterotoxigenic Escherichia coli Double Mutant Heat-Labile Toxoid (dmLT), Adjuvant-Active, Recombinant from Escherichia coli

Catalog No. NR-51681
This reagent is the tangible property of the U.S. Government.

For research use only. Not for human use.

Contributor and Manufacturer:
Jacob P. Bitoun, Ph.D., Department of Microbiology and Immunology, Tulane University School of Medicine, New Orleans, Louisiana, USA

Product Description:
NR-51681 is a recombinant toxoid of enterotoxigenic Escherichia coli (E. coli) (ETEC) heat-labile toxin (LT) with a double mutation (R192G/L211A; based on the recombinant sequence). The recombinant double mutant, dmLT or LT(R192G/L211A), has reduced proteolytic activation and enterotoxicty while maintaining adjuvanticity equal to native LT.1,2 NR-51681 was expressed in E. coli and purified by immobilized galactose chromatography.1 The theoretical molecular weight is approximately 86 kilodaltons.

The ETEC infectious process is initiated by the organism adhering to the host intestinal epithelial cells via interactions between bacterial adhesions, colonization factors [including colonization factor antigens (CFAs), coli surface (CS), and putative colonization factors (PCFs)] and host receptors.3 ETEC then causes secretory diarrhea by expressing LT and/or heat-stable enterotoxin (STh).4 Similar to the closely related cholera toxin, LT is a multimeric molecule comprised of an A subunit and five B subunits. The pentameric B subunit is essential for binding the toxin to ganglioside GM1 in host cell membranes, and a single A subunit, which needs to be nicked by proteolysis and reduced, yields an A1-enzyme and an A2-linker peptide. A1 is then translocated across the cell membrane, possibly after endocytosis, upon which it ADP-ribosylates the G protein Go5.

The amino acid sequence of both subunit A and subunit B of heat-labile toxin have been determined (GenPept: P06717 and P32890, respectively). The crystal structure of heat-labile toxin complexed with lactose has been determined to 2.3 Å (PDB: 1LTT).3

Material Provided:
Each vial of NR-51681 contains approximately 1 mg of purified recombinant dmLT adjuvant, which was lyophilized from TEAN (Tris, EDTA, sodium azide and sodium chloride) buffer.1

Note: Resuspend slowly with 1.0 mL of HyClone water and gently mix by hand to dissolve. The solution may appear slightly turbid.

Packaging/Storage:
NR-51681 was packaged aseptically in glass vials, lyophilized and sealed under vacuum.1 The product is provided at room temperature and should be stored at 2°C to 8°C immediately upon arrival. Freeze-thaw cycles should be avoided.

Functional Activity:
NR-51681 is functional in SDS-PAGE, cAMP assays in human colorectal carcinoma (T84) cells, western blot and oral adjuvanticity (ELISA) assays.1,2 The novel dmLT adjuvant promotes dose sparing, mucosal immunity and longevity of antibody responses to the inactivated polio vaccine in a murine model.1,2

Acknowledgment for publications should read “The following reagent was obtained through BEI Resources, NIAID, NIH: Enterotoxigenic Escherichia coli Double Mutant Heat-Labile Toxoid (dmLT), Adjuvant-Active, Recombinant from Escherichia coli, NR-51681.”

Biosafety Level: 1

Disclaimers:
You are authorized to use this product for research use only. It is not intended for human use.

Use of this product is subject to the terms and conditions of the BEI Resources Material Transfer Agreement (MTA). The MTA is available on our Web site at www.beiresources.org.

While BEI Resources uses reasonable efforts to include accurate and up-to-date information on this product sheet, neither ATCC® nor the U.S. Government makes any warranties or representations as to its accuracy. Citations from scientific literature and patents are provided for informational purposes only. Neither ATCC® nor the U.S. Government warrants that such information has been confirmed to be accurate.

This product is sent with the condition that you are responsible for its safe storage, handling, use and disposal. ATCC® and the U.S. Government are not liable for any damages or injuries arising from receipt and/or use of this product. While reasonable effort is made to ensure authenticity and reliability of materials on deposit, the U.S. Government, ATCC®, their suppliers and contributors to BEI Resources are not liable for damages arising from the misidentification or misrepresentation of products.
Use Restrictions:
This material is distributed for internal research, non-commercial purposes only. This material, its product or its derivatives may not be distributed to third parties. Except as performed under a U.S. Government contract, individuals contemplating commercial use of the material, its products or its derivatives must contact the contributor to determine if a license is required. U.S. Government contractors may need a license before first commercial sale.

NR-51681 is claimed in U.S. Patent Numbers 6,019,982 and 6,033,673, and the continuations, continuations-in-part, re-issues and foreign counterparts thereof.¹
