Certificate of Analysis for NR-52969

Vector pLVX-EF1α-IRES-Puro Containing the SARS-Related Coronavirus 2, USA-WA1/2020 Open Reading Frame 6 Gene

Catalog No. NR-52969

Product Description:

Note: The vial label indicates this product contains a TST tag. This nomenclature refers to a 2X Strep tag. This product does not express the Twin-Strep-tag® that is commonly referred to as a TST tag. The open reading frame 6 (orf6) gene from severe acute respiratory syndrome-related coronavirus 2 (SARS-CoV-2), USA-WA1/2020 (GenBank: MN985325) was codon optimized and modified by the addition of a C-terminal 2X Strep tag and cloned into the pLVX-EF1α-IRES-Puro lentiviral expression plasmid. The vector contains an internal ribosomal entry site (IRES) that allows a gene-of-interest and a puromycin resistance gene to be simultaneously co-expressed from a single mRNA transcript. Expression of the transcript is driven by the human elongation factor 1 alpha (EF1α) promoter. The beta-lactamase gene, *bla*, provides transformant selection through ampicillin resistance in *Escherichia coli (E. coli)* and the puromycin resistance gene, *pac*, provides transformant selection through puromycin resistance in eukaryotic cells. The deposited plasmid was transformed into NEB® Stable Competent *E. coli* cells (New England Biolabs® C3040H), grown in Luria-Bertani broth with ampicillin (100 µg per mL) for 1 day at 30°C in an aerobic atmosphere, extracted using a Plasmid Plus Maxi Kit (QIAGEN® 12963) and vialed in TE buffer (10 mM Tris-HCl, 1 mM EDTA, pH 8.0).

Lot: 70037923 **Manufacturing Date: 05AUG2020**

TEST	SPECIFICATIONS	RESULTS
Next-Generation DNA Sequencing	~ 9100 base pairs	9096 base pairs[1]
Genotypic Analysis Sequencing of orf6 insert (~ 180 base pairs)	≥ 99% sequence identity to depositor's sequence 2X Strep tag sequence confirmed	100% sequence identity to depositor's sequence[2] 2X Strep tag sequence confirmed[3]
Antibiotic Resistance Ampicillin (encoded by beta-lactamase gene *bla*)[4] Puromycin (encoded by puromycin n-acetyltransferase gene *pac*)	*bla* sequence present *pac* sequence present	*bla* sequence present *pac* sequence present
Concentration by PicoGreen® Measurement	≥ 2 µg/mL	0.4 µg in 20 µL per vial (18 µg/mL)
Amount per Vial	Report results	0.4 µg per vial
OD_{260}/OD_{280} Ratio (pre-vial)	1.7 to 2.1	1.9
Effective Bacterial Transformation NEB® Stable Competent *E. coli*	≥ 50 colonies per ng	147 colonies per ng

[1]The sequence was assembled pre-vial using the predicted sequence as the reference sequence. The complete plasmid sequence and map are provided on the BEI Resources webpage.
[2]The NR-52969 insert was codon optimized but is 100% identical with the SARS-CoV-2, USA-WA1/2020 ORF6 protein (GenPept: QHO60598.1).
[3]This 2X Strep tag is defined by the sequence N-WSHPQFEKGGGSGGGSGGGSWSHPQFEK-C. For more information, please see Busby, M., et al. "Optimisation of a Multivalent Strep Tag for Protein Detection." Biophys. Chem. 152 (2010): 170-177. PubMed: 20970240.
[4]The antibiotic ampicillin degrades quickly during growth. Bacterial stationary phase should be minimized during plasmid expansion to avoid plasmid loss and increased antibiotic concentrations may be necessary.
