DATA SHEET

Reagent: pREJO4541 clone 67 (SVPB16)

Catalog Number: 11035

Lot Number: 050740

Release Category: C

Provided: 20 µg purified plasmid DNA/vial (0.5 mg/ml)

Cloning Vector: pcDNA3.1/V5-His© TOPO®. The size of the cloning vector including the insert is 8482 bp.

Cloning Site: The env/rev cassette was TA cloned into pcDNA3.1/V5-His© TOPO®, and colonies were screened to obtain env/rev clones in the correct orientation with the CMV promoter. The size of the insert is 2959 bp.

Gene Bank: AY835449

Host Strain: MAX Efficiency STBL2™

Description: A PCR fragment containing full-length env and rev genes was derived from plasma virion-associated RNA from a subject acutely infected with a clade B virus by reverse transcription and nested PCR amplification. The env/rev cassette was cloned into pcDNA3.1/V5-His© TOPO® expression vector. A single transformed ampicillin-resistant *E. coli* colony was selected and expanded. Sequence information is available.
[Click here to see the sequence file.](#)

Special Characteristics: Plasmid Expansion: This plasmid can be expanded using MAX Efficiency STBL2™ Competent Cells or DH5a™ Competent Cells in LB medium at 34°C.
The clone represents env/rev cassette from a subject with acute subtype B infection (female to male transmission). The clone expresses a functional env/rev cassette and can be used to generate pseudotyped infectious virions. pREJO4541.67 Env containing pseudovirions are included in a standard virus neutralization panel for subtype B strains (SVPB16).

ALL RECIPIENTS OF THIS MATERIAL MUST COMPLY WITH ALL APPLICABLE BIOLOGICAL, CHEMICAL, AND/OR RADIOCHEMICAL SAFETY STANDARDS INCLUDING SPECIAL PRACTICES, EQUIPMENT, FACILITIES, AND REGULATIONS. NOT FOR USE IN HUMANS.

This clone is also available as a member of a panel set, see catalog #11227. [Click here to see the table of individual reagents for this reference panel.](#)

Recommended Storage:

-80°C.
