DATA SHEET

Reagent: Anti-HIV-1 IIIB Nef Monoclonal (AG11)

Catalog Number: 1124

Lot Number: 2

Release Category: D

Provided: 0.1 ml

Description: AE6 and AG11 antibodies recognize IIIB Nef. The reactive epitope maps to the COOH terminus of the full length Nef protein. The ascites detects Nef as a single 27 kD band in Western blots. These antibodies do not recognize HIV-1SF2 Nef. Titers given below are approximate, and will vary in different assays.

Host Site: Mouse.

Special Characteristics: Recognizes a single 27 kDa band in Western blots and is reactive against Nef in immunoprecipitation and immunofluorescent assays. The critical binding residue is the N in the BRU C-terminal YFKNC sequence. Reactive in ELISA with a BRU 13-mer. Not reactive with SF2 Nef, but recognizes recombinant IIIB Nef. Isotype is IgG₁, K chain.

Recommended Storage: Keep at 4°C for short term storage and -80°C for long term storage. Avoid freeze-thaw cycles as reagent degradation may result.

Contributor: Dr. James Hoxie

NOTE: Acknowledgment for publications should read "The following reagent was obtained through the NIH AIDS Reagent Program, Division of AIDS, NIAID, NIH: Anti-HIV-1 IIIB Nef Monoclonal (AG11) from Dr. James Hoxie."
