DATA SHEET

Reagent: HIV-1 NL4-3 Infectious Molecular Clone (pNL4-3)

Catalog Number: 114

Lot Number: 110199

Release Category: C

Provided: 10µg purified plasmid DNA (1.0 µg/µl).

Cloning Vector: pUC18

Cloning Site: The 5' *Sma*I-*Eco*RI fragment of proviral NY5 (5' *Sma*I in flanking sequences to 3' *Eco*RI) and the 3' fragment of proviral LAV (5' *Eco*RI to 3' *Nru*I in flanking sequences) were blunt-end cloned into pUC18 at the *Pvu*II site after removal of polylinker sites.

GenBank: AF324493

Host Strain: HB101

Description: Full-length, replication and infection competent chimeric DNA.

Special Characteristics: Upon transfection this clone directed the production of infectious virus particles in a wide variety of cells. The progeny, infectious virions, were synthesized in mouse, mink, monkey, and several non-T cell lines, indicating the absence of any intracellular obstacle to viral RNA or protein production or assembly. Source of Pro Virus: NY5 (5') and LAV (3') cloned directly from genomic DNA.
