DATA SHEET

Reagent:	HIV-1 PTE Gag Peptide Set
Catalog Number:	11554
Lot Number:	160102
Provided:	320 vials, 0.5 mg each, lyophilized
Description:	This peptide set is designed to represent the most frequent potential T cell epitopes (PTE) of HIV-1 Gag embedded in the sequences of circulating strains of HIV-1 worldwide. The peptides are 15 a.a. in length and contain naturally occurring 9 a.a. sequences that are potential T cell determinants, captured in an unbiased manner. Also available as a peptide pool, see HIV-1 PTE Gag Peptide Pool, cat# 12437.
Purity:	Peptides are >80% pure. Detailed purity information is available in the attached file below.
Solubility:	Peptides that are difficult to solubilize can almost always be dissolved in DMSO. Once a peptide is in solution, the DMSO can be slowly diluted with aqueous medium. Care must be taken to ensure that the peptide does not begin to precipitate out of solution. Please note: Cys and Met containing peptide sequences are highly unstable when stored in DMSO for prolonged periods of time; peptide decay is often observed within days to weeks. If DMSO is required, we recommend freshly-prepared working solutions from freeze dried aliquots of these peptides, and prepared pools.
Special Characteristics:	Click here for cat# 11554 sequence, molecular weight, peptide content and purity data Click here for individual peptide analytical data Please Note: The peptides are listed in the order of decreasing frequency.
Recommended Storage:	Keep the reagent at -20°C lyophilized and -80°C after reconstitution.

ALL RECIPIENTS OF THIS MATERIAL MUST COMPLY WITH ALL APPLICABLE BIOLOGICAL, CHEMICAL, AND/OR RADIOCHEMICAL SAFETY STANDARDS INCLUDING SPECIAL PRACTICES, EQUIPMENT, FACILITIES, AND REGULATIONS. NOT FOR USE IN HUMANS.
