### DATA SHEET

<b>Reagent:</b>	CEM CD4+ Cells
<b>Catalog Number:</b>	117
<b>Lot Number:</b>	110135
<b>Release Category:</b>	B
<b>Provided:</b>	3.8 x 10 <sup>6</sup> cells/mL. Viability is 78%.
<b>Propagation Medium:</b>	MEM, 90%; fetal bovine serum, 10%; antibiotic free.
<b>Freeze Medium:</b>	Propagation medium, 95%; DMSO, 5%; antibiotic free.
<b>Growth Characteristics:</b>	Cells are grown in suspension. An inoculum of 10 <sup>5</sup> cells/ml will increase four to five fold in 4-5 days when incubated at 37°C, providing pH is maintained at 7.0 and fresh medium is added every other day. Maintenance of the cell population at 10 <sup>6</sup> cells/ml is optimal for growth.
<b>Morphology:</b>	Lymphoblast-like
<b>Sterility:</b>	Negative for bacteria, mycoplasma and fungi.
<b>Description:</b>	Human T lymphoblastoid cell line.
<b>Special Characteristics:</b>	This cell line (originally called CEM-T4) is a naturally isolated subclone of the CEM line with high levels of surface CD4 expression.
<b>Recommended Storage:</b>	Liquid nitrogen.
<b>Contributor:</b>	Dr. J.P. Jacobs.
